PROVISIONAL AGENDA

Co-sponsored by IMO and GEF-UNDP-IMO GloNoise Partnership

2025 WORKSHOP ON THE RELATIONSHIP BETWEEN SHIP ENERGY EFFICIENCY AND UNDERWATER RADIATED NOISE

6 AND 7 NOVEMBER 2025 AT IMO HEADQUARTERS IN LONDON

DAY 1

08.30 - 09.30: Registration

Master of Ceremonies: Mr. Michael Kingston, IMO Consultant

THEMES FOR DAY 1

1 Updates on technical energy efficiency and underwater radiated noise reduction advances

2 Integrated EE and URN management, cost evaluation and incentivization schemes

Moderators: Mr. Eric Baudin, Sustainable Development Manager - Marine Biodiversity and Environmental Stewardship, Bureau Veritas and Ms. Michelle Sanders, Acting Director General, Innovation Center, Transport Canada

09.30 – 09.40	**Overview of the event (format and objectives)** *Mr. Michael Kingston, IMO Consultant*
09.40 – 09.50	**Opening address** *Mr. David Osborn, Director Marine Environment Division, IMO Secretariat*

Morning session (09.50 – 12:40)	
12 min	**Update on IMO Energy Efficiency (EE) work** *Mr. Roel Hoenders and Ms. Laura Matteos Moya Marine Environment Division, IMO Secretariat*
12 min	**Update on IMO underwater radiated noise (URN) work** *Ms. Marie-Lucie Susini, URN Correspondence Group Coordinator, Belgium and Mr. Ricardo Batista, Maritime Safety Division, IMO Secretariat*
12 min	**Energy Saving Devices (ESDs) market uptake and URN-EE case studies** *Mr. Daniel Alvarez, Team Lead – Noise & Vibration Advisory, Lloyd's Register*
12 min	**URN measurement results from electric fast-charge tugs and ferries under the US Maritime Administration META program.** *Mr. Ben Kirschmeier, Engineer, Noise Control Engineering, United States*
20 min	**Q&A**
11.00 - 11.30	Coffee break *kindly sponsored by GEF-UNDP-IMO GloNoise Partnership*
15 min	**Propeller design by optimization: UNIGE and Fincantieri experience** *Prof. Giorgio Tani, Associate Professor, UNIGE and Mr. Alessandro Marino, Naval Architect, Fincantieri*
12 min	**Protecting Blue Whales and Blue Skies: A collaborative partnership for safer whales, cleaner air, and a quieter ocean** *Ms. Jessica Morten, Marine Resource Protection Program Director, California Marine Sanctuary Foundation, United States*

12 min	**Concept of method for identifying areas where URN reduction measures are most effective, and effective measures to reduce URN while enhancing EE** *Associate Professor Masahiro Sakai, Department of Naval Architecture and Ocean Engineering (NAOE), Osaka University, Japan*
12 min	**Environmental benefits of Variable Frequency Drive (VFD) technology on double-ended ferries.** *Mr. Chanwoo Bae, Engineering Naval Architecture Manager, BC Ferries, Canada*
20 min	**Q&A**
Lunch (12.45 – 14.00)	

Afternoon session (14.00 – 17:45)	
15 min	**Comparative URN measurements on MV ERGE using conventional vs. Gate Rudder systems under the H2020 GATERS project.** *Mr. Mehmet Atlar, Professor of Naval Hydrodynamics and Mr. Cagatay Koksal, Research Associate, University of Strathclyde, United Kingdom*
12 min	**URN insights from hull and propeller coatings and Propeller Boss Cap Fin (PBCF) installations.** *Mr. Christopher Stickney, Business Partner Sustainability & Decarbonization, Stolt Tankers*
12 min	**Economic benefits of the holistic planning of URN and EE improvements** *Mr. Chris Waddington, Technical Director, International Chamber of Shipping*
12 min	**From Indicators roadmap for shipowners and ports to incentives and labs** *Ms. Antidia Citores, General Manager, Green Marine Europe*
20 min	**Q&A**
15.15– 15.45	Coffee break *kindly sponsored by GEF-UNDP-IMO GloNoise Partnership*
12 min	**The TNFD Marine transportation and cruise lines sector guidance** *Ms. Blanche de Biolley, Senior Analyst, Taskforce on Nature-related Financial Disclosures (TNFD)*
12 min	**Summary of EU SATURN project results and integration of CII/EEXI metrics** *Mr. Emilio De Angelis, Head of Environment, Signatures & Monitoring, Cetena S.p.A., Italy*
12 min	**Development of ESI noise module and technical curve modeling** *Ms. Lee Kindberg, International Association of Ports and Harbors*
12 min	**Future proofing the CII for energy efficiency and URN reduction: what needs to happen in Phase 2 of the CII review** *Mr. John Maggs, Clean Shipping Coalition Representative at IMO*
20 min	**Q&A**
16.55– 17:50	**Plenary discussion for day 1 themes facilitated by the moderators**
18:00 – 20.00	**RECEPTION** ***(Kindly sponsored by GEF-UNDP-IMO GloNoise Partnership) and POSTER SESSION.***

DAY 2

THEMES FOR DAY 2

3 Towards integrated design standards for EE and URN

4 Predictive models to evaluate co-benefits relative to EE and URN objectives

Moderators: Mr. Jesse Spence, President, Noise Control Engineering, LLC and Ms. Leila Hatch, Senior Oceans Scientist, Natural Resources Defense Council.

09.30 – 09.40	***Welcome and report from day 1 to plenary*** *Mr. Michael Kingston, IMO Consultant*

Morning session (09.40 – 12.15)	
15 min	**URN Insights from electric tug design and measurement campaigns; industry uptake through cost, infrastructure, and emissions constraints.** *Mr. Giorgio Burella, Naval Architect – Noise & Vibration Analyst and Mr. Mark Bonar, Project Manager and Naval Architect, Robert Allan Ltd., Canada*
15 min	**Technology Mastersheet for URN reduction: industry capacity, cost-effectiveness, and implementation strategies** *Ms. Sara Adams, Program Manager, Quiet Sound, Washington Maritime Blue, United States, Mr. Kevin Reynolds, Director of Research and Development, Glosten, U.S.A., and Mr. Robert Fernandez, Sustainability Engineer, ABS*
12 min	**Reducing ship URN by propeller design and air injection and its effect on energy efficiency** *Dr. Johan Bosschers, Senior Researcher, MARIN, Kingdom of the Netherlands*
20 min	**Q&A**
10.45 – 11.15	Coffee break *kindly sponsored by Belgium*
12 min	**Simulation-driven ship design leverages advanced numerical tools to optimize vessel performance and underwater radiated noise (URN) before construction** *Dr. Dmitry Ponkratov, Marine Director, Siemens Digital Industries Software*
12 min	**Silent notation and EE considerations at the design stage and afterwards** *Mr. Øystein Solheim Pettersen, Head of Section, Noise and Vibration, DNV*
15 min	**Preliminary Findings from Canada's URN Management Pilot and Maersk's Vessel Design Perspective** *Ms. Aurelie Cosandey-Godin, Policy Advisor, Transport Canada and Capt. Deepak Kukreti, Head of Fleet Environment and Regulatory Affairs, Maersk*
20 min	**Q&A**

Lunch (12.15 – 13.45)	

Afternoon session (13.45 – 17.30)	
12 min	**GloNoise Partnership updates** *Ms. Sevtap Özdoğan, IMO Secretariat*
12 min	**Foresight 2050: URN trends in European waters under GHG and URN mitigation scenarios** *Mr. Samy Djavidnia, Environment & Sustainability Senior Project Officer, European Maritime Safety Agency (EMSA)*
12 min	**MARINE-T: Mapping fuel burn and URN across US waters to inform policy and planning** *Mr. Dan Flynn, Senior Analyst, US DOT Volpe Center*
12 min	**Integrating URN and ship efficiency into ecosystem-based Maritime Spatial Planning.** *Mr. Thomas Folegot, Founder and CEO, Quiet-Oceans, France*
20 min	**Q&A**
14:55 – 15:25	Coffee break
15 min	**Use of URN measurements to support prediction models (input and ground truth)** *Ms. Vanessa Zobell, Postdoctoral Researcher, Scripps and Ms. Federica Pace, Director of Applied Sciences Europe, JASCO*
12 min	**Lessons from GHG Studies** *Mr. Jukka-Pekka Jalkanen, Senior Researcher, Finnish Meteorological Institute (FMI)*
15 min	**Q&A**
16.10 – 17.05	**Plenary discussion for day 2 themes facilitated by the moderators**
17.05 – 17.25	**General discussion on next steps and conclusions**
17.25 – 17.30	**Closing of workshop**
END OF WORKSHOP	

2025 EE/URN WORKSHOP

Speaker bios

DAY 1

Opening and Welcome

Mr. David Osborn

David Osborn, an Australian national, joined the International Maritime Organization (IMO) in September 2025. The IMO is the United Nations specialized agency responsible for the safety and security of shipping and the prevention of marine and atmospheric pollution by ships.

Mr. Osborn brings extensive experience in environmental management within the UN system and at national government level. From 2013 to 2020, he served as Director of the Marine Environment Laboratories at the International Atomic Energy Agency (IAEA), before taking up the role of Deputy Director in the Ecosystems Division of the United Nations Environment Programme (UNEP) in Nairobi from 2020 to 2021.

At the national Australian level, Mr. Osborn has held several senior leadership positions with the Australian Government. These include serving as General Manager, Safety and Technical, with the Australian Radioactive Waste Agency (2021–2023), and earlier in in his career with the Department of Environment and Water Resources and the Great Barrier Reef Marine Park Authority. He served as a commissioned officer with the Royal Australian Navy from 1991 to 1995 where he contributed to the preparation of the Navy's inaugural environment policy.

Mr. Osborn holds a degree in Environmental Science from the University of Canberra and a Master's degree in Environmental Law from the Australian National University. Throughout his career, he has contributed to both domestic and international programmes and initiatives addressing marine pollution, coastal management, climate change, and biodiversity conservation.

A lifelong advocate for environmental sustainability, Mr. Osborn is driven by a mission to protect ecosystems and promote innovative solutions to complex environmental challenges.

Mr. Michael Kingston (Master of Ceremonies)

Michael Kingston, Managing Director, Michael Kingston Associates, IMO Consultant, Special Advisor to Arctic Council's Protection of Arctic Marine Environment Working Group (PAME).

Michael Kingston, from Goleen, Co Cork, Ireland, comes from a long family history of fishing and merchant seafaring. He was awarded Lloyd's List Global Maritime Lawyer of the Year for his contribution to safety of life at sea in the Polar regions. Michael represented the International Union of Marine Insurance (IUMI) on the IMO's world delegation Correspondence Group in the

development of the 'ice regime methodology' (POLARIS), following his earlier work on specialist insurers, Lloyd's of London's 2012 Report 'Arctic Opening: Opportunity and Risk in the High North'.

Michael also worked with the panel of experts that contributed to Lloyd's 2013 Report 'The Challenges and Implications of Removing Shipwrecks in the 21st Century'. In July 2015 Michael was presented with the US Coastguard Challenge Coin for his efforts to promote maritime safety by raising awareness about the IMO Polar Code.

Michael is a key member of PAME's Organizing team that developed and administers the Arctic Shipping Best Practice Information Forum and its Webportal, established to assist in the implementation of the Polar Code.

Michael has been a key member of the IMO Secretariat's team concerning the implementation of the 2012 Cape Town Agreement for the Safety of Fishing Vessels.

Michael has advised several Governments and international organizations, and he assists in representing IMO on PAME's project led by Iceland, Spain, and IMO: *'Raising awareness in the Arctic Council of the provisions of the 2012 Cape Town Agreement for the Safety of Fishing Vessels', as well as PAME's 'POLARIS Review Project'.*

Mr. Eric Baudin

As Sustainable development manager, within Bureau Veritas Marine & Offshore, Eric focuses on regulatory and business developments related to marine biodiversity and environmental stewardship.
Graduated structural engineer and master from "Conservatoire National des Arts et Métiers" – Paris, Eric joined BV in 2000 as onsite measurement engineer during 7 years, then joined 9 years the research department, managing for BV, measurement related EU projects and other JIPs, covering different topics such as:

- ship hydroelastic structural behavior at sea
- sloshing
- noise and vibrations onboard
- underwater radiated noise (URN) from ships and its impact on fauna.

He carried on leading the measurements team during 5 years and has then driven the innovation for BV Solutions M&O during 4 years.

Today Eric's focus is mainly on environmental products and especially those related to underwater noise, ship to cetaceans collisions and other noise and vibrations.
His involvement on underwater noise includes:

- technical support of the French maritime authorities and French delegation at IMO,
- active participation alongside Canada, USA, France and South-Africa initiatives on the topic
- project manager for BV within research projects in Europe (e.g. PIAQUO, SEADETECT and SATURN) and out of Europe (e.g. QWIO in South-West Indian Ocean); and
- business and partnership development on URN related services.

Ms. Michelle Sanders

Michelle Sanders assumed the role of Acting Director General of Transport Canada's Innovation Centre in August 2025. In this position, she provides strategic and functional leadership for Transport Canada's Research, Development, and Demonstration (RD&D) activities, advancing the department's key innovation priorities and supporting broader Government of Canada science and technology objectives.

Michelle joined Transport Canada in 2017 as the Director of Clean Water Policy within the Environmental Policy Directorate, where she led the development of policies and strategic frameworks addressing the environmental impacts of marine shipping. Her key files included underwater vessel noise and its effects on endangered marine mammals, vessel strikes, biofouling, marine plastic litter, and abandoned or hazardous vessels.

She later served as Acting Director General of the Environmental Policy Directorate, providing strategic oversight on the department's environmental agenda. Her leadership encompassed efforts to decarbonize transportation across all modes, reduce the impacts of shipping on the marine environment, strengthen international collaboration on environmental priorities, and advance climate change adaptation strategies.

From August 2022 to August 2025, Michelle served as Canada's representative to the International Maritime Organization (IMO) — the United Nations agency responsible for regulating international shipping and protecting the marine environment. In this role, she represented and negotiated on behalf of Canada in key international discussions and policy decisions.

Michelle is a lawyer by training, holding law degrees from the University of Ottawa and McGill University, as well as a Bachelor of Arts in Politics from Princeton University. Outside of work, she enjoys spending time at the rink or baseball diamond cheering on her sons, or planning her next outdoor adventure.

Morning session (09:50 – 12:40)

Mr. Roel Hoenders

Mr. Roel Hoenders is Head of Climate Action and Clean Air in the IMO Secretariat and oversees IMO's regulatory work on energy efficiency and emission reduction of international maritime transport. Roel holds a law degree with specializations in international environmental and maritime law. Before joining IMO, Mr Hoenders held various positions in the European Commission, the European Maritime Safety Agency (EMSA) and in the port and logistics sector.

Ms. Laura Mateos Moya

Laura Mateos Moya is the Project Analyst of the Future Fuels and Technology Project aimed at supporting the regulatory decision-making at IMO on the reduction of greenhouse gas (GHG) emissions from ships. Previously, Laura worked in the Marine Environment Division and the Technical Cooperation Division at IMO. Laura holds a MSc in Information Science from the University College London (UCL).

Dr. Marie-Lucie Susini

Dr. Marie-Lucie Susini is a marine biologist and ecologist by training, currently serving as Environmental Policy Advisor at Belgium's Federal Public Service (FPS) Mobility and Transport.

After 11 years working on biodiversity for Belgium's Focal Point to the UN Convention on Biological Diversity, Dr. Susini joined the Belgian FPS Mobility and Transport, DG Shipping, in 2020, where she focuses on the environmental impacts of shipping, including underwater radiated noise (URN), exhaust gas cleaning systems, or bio-fouling.

Since 2023, Dr. Susini has been actively engaged in IMO's work on URN, chairing the working group that revised the URN Guidelines. Lately, she has coordinated the Correspondence Group on URN established at SDC 11, that had the objectives to: review and progress the technical objectives of the URN Action Plan, develop a framework to monitor the implementation of the Revised URN Guidelines, and draft terms of reference for a study to address identified knowledge gaps, in collaboration with the Secretariat.

Mr. Ricardo Batista

Mr. Batista is a Naval Architect and Marine Engineer, working in IMO, Maritime Safety Division –Section on Marine Technology and Goal Based Standards. Secretary for Sub-Committee on Ship design and Construction and responsible for the files on Maritime Autonomous Surface Ships (MASS), Goal Based Standards (GBS), Intact Stability, Ship Structures and point of contact in MSD for Underwater Radiated Noise (URN).

Previously worked in the field of sustainable energy systems for ships, for a total of ten years, notably with the last three at European Commission, Directorate-General for Mobility and Transport. In the Commission have been engaged in the development, negotiation and preparatory work for implementation of the FuelEU Maritime, a regulation that entered in force on 1 January 2025, designed to reduce the GHG intensity of the energy used onboard ships.

Before joining the European Commission, worked in the European Maritime Safety Agency (EMSA), responsible for technical and scientific support to the Commission on several topics of Ship Safety and Sustainability, with a focus on energy systems, fire safety and electrification.

In addition to the above, have Classification Society, shipyard and onboard experience, respectively as Naval Architect and Marine Engineer. Specialized in submarine design and construction.

Mr. Daniel Alvarez

Master of Science in Engineering Acoustics with approximately 20 years of experience in Marine & Offshore sector. Currently leading the Noise & Vibration Team in Copenhagen and the global program in Lloyd's Register pertaining the mitigation of underwater radiated noise from commercial shipping.

Daniel delivered and managed numerous projects in connection with noise & vibration, engineering dynamics, risk assessments, occupational & environmental impact, ship performance and asset integrity. Consultant in nature, Daniel has led business development initiatives across the globe with permanent assignments in United Arab Emirates and Singapore. Moreover, Daniel has led personnel in

Denmark and Singapore, as well as managed operations of newly built teams in connection with his business development.

Mr. Ben Kirschmeier

Mr. Kirschmeier is an engineer at Noise Control Engineering, LLC (NCE), an acoustics and vibration based consulting firm specializing in designing quiet vessels. He earned a PhD from North Carolina State University studying fluid structure interactions in nonlinear systems.

Since joining NCE in 2020 he has worked to reduce the noise and vibration on numerous vessels. Additionally, he led NCE's efforts to develop a quiet sandblasting nozzle and a machine learning program for helicopter noise modelling.

Dr. Giorgio Tani

Giorgio Tani was born in Genoa, Italy, in 1985. He received the M.Sc. degree in Naval Architecture and Marine Engineering and the Ph.D. degree in Naval Architecture and Marine Engineering from the University of Genoa, Italy, in 2011 and 2015, respectively.

From 2014 to 2016 he had two postdoctoral contracts at the University of Genoa. In 2016 he became Research Fellow with the University of Genoa, Dept. of Electrical, Electronic, Telecommunications Engineering, and Naval Architecture (DITEN). He was appointed Associate Professor in Naval Architecture in 2023. He is responsible for the Cavitation Tunnel and the towing tank of the University of Genoa from 2021.

His research interests are in the areas of experimental naval architecture, with a specific focus on propeller hydrodynamics, cavitation and underwater radiated noise. The main research activities carried out include: experimental campaigns on conventional and non-conventional propellers, velocimetric measurements, cavitation erosion, cavitation characterization by computer vision approaches, measurement of pressures pulses and radiated noise, acoustic propagation, predictive modelling of radiated noise by semi-empirical, data-driven and hybrid approaches.
He has been involved in many research projects, funded by the European Union and many industrial companies. He is author of more than 60 scientific papers (about 30 published in international journals). He is member of the Hydro Testing Forum.

Mr. Alessandro Marino

Alessandro Marino received his Bachelor's degree in Naval Architecture and Marine Engineering from the University of Genoa (Italy) in 2015, his M.Sc. degree in Naval Architecture from Newcastle University (UK) in 2016 and he is currently enrolled as a PhD student in Naval Architecture and Marine Engineering at the University of Strathclyde (UK).

From 2020 he has been working at the Merchant Ships Division of Fincantieri S.p.A. (Italy) as a Naval Architect, focusing on hull shape design, propeller design, hydrodynamics and aerodynamics analyses. His activities include experimental and computational fluid dynamics, manoeuvring and seakeeping testing, URN analysis, sea trial testing.

He has a research background, with a specific focus on biomimetics applied to underwater structures. In particular, he studied the application of humpback whales' tubercles to flat plates

and ship structures, assessing their impact in terms of potential drag reduction and fouling prevention. He is author and coauthor of scientific conference and journal papers on this, and other applied naval architecture topics.

Ms. Jessica Morten

Jessica (Jess) Morten is the Director of Marine Resource Protection at the California Marine Sanctuary Foundation (CMSF) and leads the resource protection projects that the foundation manages, including the Protecting Blue Whales and Blue Skies Program. For the last 9 years, Jess has also supported the National Oceanic and Atmospheric Administration (NOAA) as an Affiliate with the Office of National Marine Sanctuaries and plays a key role analyzing data, facilitating discussions, and working with researchers, managers, and industry to implement protections for threatened and endangered whales along the U.S. west coast.

Jess began her work with NOAA as a California Sea Grant Fellow with NOAA's Channel Islands National Marine Sanctuary in 2016. Her prior background includes population and behavioral field research work focused on humpback, North Atlantic right, and killer whales as well as policy research focused on evaluating impacts associated with fishery management strategies. Jess holds an M.A. in International Environmental Policy from the Middlebury Institute of International Studies and a Bachelor's degree in Environmental Science from Skidmore College.

Dr. Masahiro Sakai

Masahiro Sakai is an Associate Professor at the Graduate School of Engineering, The University of Osaka, Japan. His research focuses on underwater radiated noise from shipping, particularly based on measurement at sea. He received his Ph.D. in Engineering from The University of Osaka in March 2019. He was appointed as Assistant Professor in April 2019 and promoted to Associate Professor in October 2024.

Mr. Chanwoo Bae

Mr. Bae embarked on his career at a shipyard in South Korea following his completion of a master's degree in ship hydrodynamics field (CFD). During six years at the shipyard, he worked as a naval architect, primarily focusing on the hull form and propeller design of large commercial ships. After relocating to Canada, his design portfolio expanded to cover a broader spectrum of marine vehicles, including custom yachts, tugs, barges, and coastal ferries. Prior to joining BC Ferries, he also contributed his expertise by teaching naval architecture at a maritime college in Newfoundland, Canada.

His passion lies in building environmentally-friendly and highly efficient ships. At BC Ferries, he is actively involved in numerous projects related to hull fouling prevention, URN issues, harnessing Big Data for enhanced ship operation, and advanced multi-physics computational techniques.

Afternoon session (14:00 – 17:45)

Dr. Mehmet Atlar

Mehmet Atlar is the Professor of Naval Hydrodynamics in the Department of Naval Architecture, Ocean and Marine Engineering at the University of Strathclyde. He has more than forty years of experience in experimental and theoretical hydrodynamics with special emphasis on ship powering, propulsion, cavitation and underwater radiated noise (URN). He has participated and coordinated many research and Innovation projects funded by the EU FP, H2020, Horizon Europe, EPSRC, UKRI, UK-MoD, and industry. He led the design and commissioning of Newcastle University's Research Vessel "The Princess Royal" when he was the Professor and directing the Emerson Cavitation Tunnel until 2017. He participated in the numerous ITTC Committees including the Executive, Advisory and five other technical committees in the member and chair capacities. He recently led the three years H2020 Project GATERS with 18 partners to retrofit first novel gate rudder propulsion system for energy-saving, GHG reduction and URN mitigation. Prof Atlar published more than 300 publications on the International refereed journals, conferences, and technical reports and received numerous awards, including the most recent TRAVISION 2022 Senior Researcher award based on his activities in the GATERS project.

Dr. Cagatay Koksal

Dr. Cagatay Koksal (BSc, MSc, PhD) is a Naval Architect and Marine Engineer with a PhD in Hydrodynamics. He is currently a Researcher in the Department of Naval Architecture, Ocean and Marine Engineering at the University of Strathclyde and previously held the position of the Project Manager of the GATERS Project. His expertise lies in experimental and numerical hydrodynamics, with hands-on experience in model testing, sea trials, and underwater noise measurement techniques.

Mr. Christopher Stickney

Chris Stickney is Business Partner for Sustainability and Decarbonization at Stolt Tankers, with over 10 years of maritime industry experience in sustainability, regulatory, operations and logistics. He leads projects on sustainable shipping solutions and decarbonization initiatives while advising on regulatory strategies. Chris holds a BS in Marine Transportation from Texas A&M at Galveston and a USCG Third Mate Unlimited License.

Mr. Chris Waddington

Chris Waddington is Technical Director at the International Chamber of Shipping (ICS).

He is responsible, in conjunction with the Nautical Director for the development and implementation of ICS policy on technical, operational and environmental regulatory risks affecting international shipping. He actively participates in IMO Committees and industry associations, to represent the interests of ICS Members, shipowners and operators.

The first 23 years of his career has been founded in the shipping sector, mainly working on the design, construction and operational support of passenger ferries. For the subsequent 15 years he has focused on the floating production sector of the Oil and Gas industry, project managing FPSO and FLNG design work, supporting field developments, and supervising procurement of floating production vessels. He has also acted as Lenders' Technical Advisor on behalf of banks and Export Credit Agencies. He is a chartered engineer, a Fellow of the Royal Institution of Naval Architects, and a member of the Society of Naval Architects and Marine Engineers.

Chris has worked in Australia, Italy, Poland, Singapore, Vietnam and the UK.

Dr. Antidia Citores

Since February 2025, Antidia Citores has been Green Marine Europe's General Manager and Spokesperson. She and her team are responsible for developing the European environmental certification program.

Formerly Head of the lobbying department and spokesperson for Surfrider Foundation Europe, she also brings her 4-year experience as a project manager for Green Marine Europe, which coordinated the program during its implementation in Europe.

Antidia holds a PhD in law in maritime transportation's ecological transition. She is a founder member of the Ocean & Climate Platform. She is a founder of Beyond Plastic Med Coalition. She made part of the European Commission's Mission Board for Healthy ocean, seas, coastal and inland waters led by Pascal Lamy.

Ms. Blanche de Biolley

Blanche de Biolley is a Senior Analyst at the Taskforce on Nature-related Financial Disclosures (TNFD), working across its Technical and Data Initiatives. She focuses on advancing the TNFD's ocean workstreams, contributing to sector guidance for marine transportation, cruise lines and fishing, as well as to the TNFD's discussion paper on measurement of ocean-related issues. Blanche holds an MSc in Environmental Technology from Imperial College London.

Mr. Emilio De Angelis

Graduated in Mechanical Engineering in 2002 at the University of Genoa, De Angelis joined the Fincantieri Group in 2007 after four years of experience in broad-spectrum industrial maintenance support and management services.

After a first period dealing with noise and vibration on board and structural dynamics, since 2015 he is in charge of the business unit, now called Environment, Signatures & Monitoring, within the Maritime Engineering & Research area of CETENA (http://www.cetena.it), with transversal responsibilities to all the main aspects of engineering applied to naval design. In particular: activities related to the ship's signature (infrared and underwater noise), structural monitoring systems, experimental-numerical analyses and validation of numerical models, containment of polluting emissions, comfort of personnel on board.

Dr. Lee Kindberg

Dr. Lee Kindberg was Head of Environment and Sustainability for Maersk in North America, and is now with the Starcrest Consulting Group, where she is involved in maritime environmental and decarbonization strategies for Port Authorities and IMO. She continues to be part of the team working to establish the Los Angeles-Long Beach-Shanghai Green Shipping Corridor. She is also a member of the Board of OceanWings, a supplier of wind-assisted propulsion systems for large commercial vessels.

She served on the Marine Board of the US National Academies of Sciences, the US EPA's Clean Air Act Advisory Committee and chaired the EPA Ports Workgroup. She was active for 18 years in the Clean Cargo Working Group, a global program dedicated to reducing the environmental impact of shipping.

Mr. John Maggs

After studying for degrees in International Relations and Maritime Economics, Policy & Law John has spent most of the last 35 years working and campaigning on shipping environmental problems, including issues as diverse as tanker safety, oil spills, harmful anti-fouling paints, and air pollution from ships. For the past 20 years this work has included the climate impacts of shipping, first for Seas at Risk in Brussels and more recently Ocean Conservancy in the US. John attended his first IMO meeting in 1992 and was a long-standing member of the Friends of the Earth International (FOEI) delegation to IMO before helping found the Clean Shipping Coalition (CSC) in 2011. He was President of CSC from 2013-2024 and is currently its Representative at IMO.

DAY 2

Mr. Jesse Spence

Mr. Spence is the President of Noise Control Engineering, LLC (NCE), an acoustical consulting firm specializing in the design of quiet vessels. He is also the chair of the SNAME EC14 working group on Underwater Noise. He earned a bachelor's degree in mechanical engineering from the University of Rochester and a master's degree in Acoustics from Boston University. Since joining NCE in 2001, Mr. Spence has performed assessments and engineered solutions for underwater noise over a wide range of applications, from the quietest research vessels to commercial vessels and offshore platforms. Mr. Spence has spearheaded various internal and external initiatives to develop and apply technologies that address complex marine acoustic and vibration challenges, with the goal of reducing noise for operational and environmental concerns.

Dr. Leila Hatch

Dr. Leila Hatch is a Senior Oceans Scientist at the Natural Resources Defense Council. Through her previous work for the US National Oceanic and Atmospheric Administration (NOAA), she supported the United Nations International Maritime Organization in their implementation of an experience building phase for guidelines to reduce underwater noise from vessels. At NOAA, Dr. Hatch managed a national underwater sound monitoring program for US National Marine Sanctuaries and co-led the agency's Ocean Noise Strategy, supporting science and policy efforts aimed at reducing the impacts of underwater noise on marine life and integrating sound-derived observations within broader marine life data collection, interpretation, management and access initiatives. Prior to NOAA, she worked as a fellow in the US Congress supporting ocean and coastal policy and participated in global research programs to study human impacts to whale and dolphin populations. She holds a PhD from Cornell University and a BA from Yale University and lives and works in Arlington, Massachusetts.

Morning session (09:40 – 12:15)

Dr. Giorgio Burella

Giorgio Burella is a Naval Architect and Noise and Vibration Analyst with Robert Allan Ltd (RAL). Before joining RAL in 2021, he earned a Ph.D. in Ocean and Naval Architectural Engineering at Memorial University of Newfoundland, focusing on shipboard noise and vibration prediction and mitigation. Giorgio has been deeply involved in RAL's measurement campaigns to assess the underwater noise signature of modern ship-handling and escort tugs, including the ElectRA series of battery-electric tugs.

Mr. Mark Bonar

Mark Bonar has been a Naval Architect at Robert Allan Ltd. since 2017, contributing to a wide range of tugboat designs. Mark's recent projects have involved integrating low-emission technologies into workboat designs to support environmentally responsible operations. He has been the lead naval architect and Project Manager on the ElectRA, VoltRA, eRA, and AmpRA series of battery electric tugs.

Ms. Sara Adams

Sara Adams is a Program Manager at Quiet Sound, a program of Maritime Blue. She manages the Voluntary Operational Measures portfolio, including the seasonal voluntary slowdown in Admiralty Inlet. Sara received her Master of Marine Affairs from the School of Marine and Environmental Affairs at the University of Washington.

Her graduate research focused on understanding the factors that motivate shipping companies to participate in the Quiet Sound voluntary slowdown, including environmental and sustainability considerations. In addition to half a decade as a liveaboard sailor, Sara brings ten years of experience in identifying and implementing multi-benefit solutions to complex multi-sectoral problems. Sara received her B.A in Biology and Clinical Nutrition from California Polytechnic State University. Sara is certified in Corporate Social Responsibility from the University of Colorado Boulder and Marine Diesel Engines from the Seattle Maritime Academy.

Mr. Kevin Reynolds

Kevin Reynolds leads the research and development program at Glosten, a leading naval architecture and marine engineering firm based in the United States. He served as engineer of record for mechanical and controls systems on the floating radar platform *SBX-1*, supported the design and construction of the first U.S. ammonia liquid-gas carrier *Harvest*, led the design of a recently-delivered rocket-landing platform vessel and a floating nuclear power plant in collaboration with Westinghouse and Core Power.

He holds a US Coast Guard unlimited chief engineer license and is a Chartered Engineer in the UK, a Fellow of IMarEST, and a licensed Professional Engineer in Washington State. For over two decades, he has specialized in energy efficiency, reducing vessel emissions, nuclear propulsion, alternative fuels, and management of aquatic invasive species. Kevin provides advisory support to Washington State, California, the U.S. Environmental Protection Agency, and the U.S. Coast Guard.

Mr. Robert Fernandez

Robert Fernandez is a Sustainability Professional and Naval Architect at ABS's Global Sustainability Center in Houston, where he leads ESG reporting and GHG verification projects for maritime and offshore clients. He specializes in vessel environmental compliance, carbon accounting (Scopes 1–3), ISO 14064-3 verification, and the development of carbon intensity metrics. He has run materiality assessments and drafted reports to the IFRS, GRI and SASB frameworks. Prior to joining ABS, Robert worked as a naval architect managing construction, stability testing, and structural design for ferries, dredges, and other vessels. He holds a B.S. in Ocean Engineering from Texas A&M University.

Dr. Johan Bosschers

Educated as an aeronautical engineer at Delft University of Technology, Johan Bosschers started working at MARIN about 29 years ago where he has usually been involved in research-type projects on propeller hydrodynamics and hydroacoustics. He has performed model-scale as well as full-scale measurements on propeller-induced hull-pressure fluctuations and underwater radiated noise and he has developed and applied computational methods for this purpose. In 2018 he completed a PhD on the broadband noise of propeller tip-vortex cavitation.

Dr. Dmitry Ponkratov

Dmitry Ponkratov, PhD, MBA, is a Marine Director at Siemens Digital Industries Software. He is a naval architect with international experience gained in China, Norway and the UK. He worked as an associate professor at the Norwegian University of Science and Technology, a senior consultant at the Lloyd's Register Technical Investigation Department and a Technical Director at the Royal Institution of Naval Architects. He is a Chartered Engineer and a Royal Institution of Naval Architects Fellow.

Mr. Øystein Solheim Pettersen

Øystein Solheim Pettersen is Head of Section for the section of Noise and Vibration in DNV Maritime Advisory. He has a master's degree in electronics with a specialization in marine acoustics. In DNV he has been primarily been working with underwater noise, with experience from full-scale underwater noise measurements and troubleshooting as well as carrying out noise predictions for new designs.

Dr. Aurélie Cosandey-Godin

Aurélie Cosandey-Godin is a Policy Advisor on the Marine Environmental Protection Policy Team at Transport Canada. She leads Canada's international efforts at the IMO to advance collaboration and action on underwater vessel noise, and manages the development of domestic policies, including noise reduction targets and vessel management plans. Aurélie brings over a decade of experience in marine conservation, science-policy integration, and stakeholder engagement. Prior to joining Transport Canada, she worked with NGOs, academia, and international organizations on marine biodiversity protection, sustainable fisheries, and ocean governance. She holds a PhD in Biology from Dalhousie University. Her work bridges science and policy to support evidence-based decision-making in marine environmental protection, with a particular focus on the impacts of shipping on marine mammals — including acoustic disturbance, habitat degradation, and mitigation strategies.

Capt. Deepak Kukreti

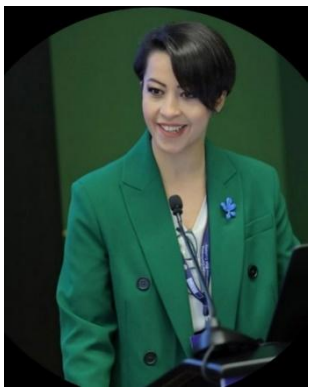

Deepak Kukreti leads the Fleet Environment and Regulatory team at the global shipping and logistics company A.P. Moller - Maersk.

He has over 25 years of experience in Ocean Logistics. He has sailed for many years as a Master and held prior positions, within the organization, in Marine Operations, Strategic Projects & Optimization, and Fleet Management. He is also the Vice Chair of the World Shipping Council's Safety & Security Council.

Deepak in his current role engages with regulators and relevant entities, regionally and internationally, and participates at the IMO Committee sessions as part of the Danish delegation. He holds an MBA from the Manchester Business School, University of Manchester.

Afternoon session (13:45 – 17:30)

Ms. Sevtap Özdoğan

Sevtap Özdoğan is a senior maritime professional with extensive expertise in international and EU maritime policies, as well as the blue economy. She currently serves as the manager of the GloNoise project at the International Maritime Organization (IMO). With over two decades of experience in transport policy and project management, she has played a key role in the development and execution of numerous high-impact projects supported by the EU and the World Bank.

Mr. Samy Djavidnia

Samy Djavidnia holds a Bachelor's degree in Physics, a Master's degree in Space Science and a Master's degree in Humanitarian Action. Before joining the European Maritime Safety Agency (EMSA), he gained extensive international experience working for the European Space Agency (ESA) in Germany and Spain, for Imperial College London in the UK, and for the European Commission's Joint Research Centre (EC JRC) in Italy.

At EMSA, Samy leads the development of initiatives related to sustainability and environmental monitoring, with a particular focus on decarbonisation and underwater radiated noise. He is responsible for coordinating the European Maritime Transport Environment Report (EMTER) programme, a flagship initiative providing knowledge and analysis to support EU policies for a greener and more sustainable maritime sector.

Dr. Dan Flynn

Dan Flynn, PhD is a data scientist with 20 years of experience in quantitative research on sustainability, climate science, transportation safety, and environmental science. His research projects span across transportation modes, using statistical tools to derive insights from and create compelling visualizations of complex data sets.

Flynn works on resilience of transportation systems to natural hazards, scenario modeling of scenarios for transportation sustainability, roadway safety analysis, novel sources of infrastructure data, and the use of using AI and machine learning to enhance public sector transportation research. He works with multiple U.S. DOT administrations and federal agencies, supporting the Offices of the Undersecretary of Transportation for Research and Policy, ARPA-I, MARAD, FHWA, FMCSA, NOAA, and USGS.

Prior to joining the U.S. DOT Volpe Center, Flynn was a research scientist in sustainability and global change, working at Harvard University, the University of Zurich, and the Chinese Academy of Sciences. He has taught courses on environmental science, sustainable energy solutions, and data science solutions using open-source statistical programming languages.

Dr. Thomas Folegot

Dr. Thomas Folegot is an internationally recognized expert in ocean acoustics, with over 30 years of experience in the field. He holds an M.Sc. in Physical Acoustics (1995) from École Centrale de Lyon and a Ph.D. in Physical Acoustics (2003) from the University of Paris. Dr. Folegot began his career as a scientist with the French Military Centre of Oceanography, focusing on ocean acoustic tomography. He later served as Project Manager for the French Ministry of Defence, where he led the design of the first high-frequency underwater Source Receiver Array.

Following a five-year tenure as a senior scientist and project leader at the NATO Undersea Research Centre (now CMRE), Dr. Folegot founded Quiet-Oceans in 2010. Quiet-Oceans was established to tackle the growing concerns around anthropogenic noise and its impact on marine life, aligning with emerging regulations.

As a member of the Technical Subgroup on “Noise” appointed by the European Commission, Dr. Folegot contributes his extensive expertise in ocean noise modeling, signal processing, and measurement. In addition to his scientific qualifications, he holds an Executive Master in Business Unit Management, bridging the gap between cutting-edge research and practical solutions for ocean sustainability.

Dr. Vanessa ZoBell

Dr. Vanessa ZoBell is a postdoctoral researcher at the Scripps Institution of Oceanography at UC San Diego. Specializing in acoustical oceanography, Dr. ZoBell utilizes innovative techniques to explore areas of the ocean with high human use. Her primary objective is to leverage data-driven insights and advanced modeling to develop effective solutions for mitigating threats to marine organisms in rapidly changing marine environments. At present, Dr. ZoBell's research focuses on pioneering noise pollution reduction strategies for commercial vessels, encompassing measures such as speed adjustments, enhanced design considerations, optimized routes, and strategic scheduling. Her research contributes to the development of the blue economy and sustainable marine transportation, informing both research as well as international policy.

Dr. Federica Pace

Dr. Federica Pace is the Director of Applied Sciences for JASCO Europe. She obtained an honours degree in Marine Biology from Saint Andrews University and then specialised in underwater acoustics and signal processing for her master’s and PhD at the Institute of Sound and Vibration Research in Southampton. For the past 12 years, she has been working as a consultant providing advice on the assessment of underwater sound impacts on marine life.

Dr. Jukka-Pekka Jalkanen

Dr. Jukka-Pekka Jalkanen works as a senior researcher at the Finnish Meteorological Institute. He has almost two decades of experience in studies of environmental impacts of shipping, especially ship emission modeling. He is the lead developer of the Ship Traffic Emission Assessment Model (STEAM). Dr Jalkanen has contributed to scientific background studies of the Emission Control Area applications of the Baltic Sea, North Sea, and the Mediterranean Sea, as well as the environmental impact assessments of the global 2020 Sulfur cap, the European Maritime Transport Environmental Reports and the third IMO Greenhouse Gas study. His team is responsible for the annual reporting of air emissions, discharges, and underwater noise of the Baltic Sea shipping.
