or arrangements: .1 provide safety standards at least equivalent to the requirements of this chapter and have been evaluated and tested in accordance with the recommendations of the Organization;** or .2 have successfully undergone, to the satisfaction of the Administration, evaluation and tests which are substantially equivalent to those recommendations. 8.1.5 Before accepting life-saving appliances and arrangements that have not been previously approved by the Administration, the Administration should be satisfied that life-saving appliances and arrangements comply with the requirements of this chapter. 8.1.6 Except where otherwise provided in this Code, life-saving appliances required by this chapter for which detailed specifications are not included in part Cof chapter III of the Convention should be to the satisfaction of the Arnninistration. * Refer to the Recommendation on testing of life-saving appliances, adopted by the Organization by resolution A.689(17). ** Refer to the Code of practice for the evaluation, testing and acceptance of prototype novel life-saving appliances and arrangements, adopted by the Organization by resolution A.520(13). - by the Organization by resolution A.689(17). ** Refer to the Code of practice for the evaluation, testing and acceptance of prototype novel life-saving appliances and arrangements, adopted by the Organization by resolution A.520(13). W/1687n/pp/EWP RESOLUTION MSC.36(63) (adopted on 20 May 1994) ADOPTION OF THE INTERNATIONAL CODE OF SAFETY FOR HIGH SPEED CRAFT MSC 62123/Add.2 ANNEX 18 Page 82 8.1. 7 8.1. 8 8.1. 9 8.1.10 The Administration should require life-saving appliances to be subjected to such production tests as are necessary to ensure that the life-saving appliances are manufactured to the same standard as the approved prototype. Procedures adopted by the Administration for approval should also include the conditions whereby approval would continue or would be withdrawn. The Administration should determine the period of acceptability of life-saving appliances which are subject to deterioration with age. Such life-saving appliances should be marked with ameans for determining their age or the date by which they should be replaced. For the purposes of this chapter, unless expressly provided otherwise: - Such life-saving appliances should be marked with ameans for determining their age or the date by which they should be replaced. For the purposes of this chapter, unless expressly provided otherwise: . 1 "Detection" is the determination of the location of survivors or survival craft . . 2 "Embarkation ladder" is the ladder provided at survival craft embarkation stations to permit safe access to survival craft after launching • . 3 "Embarkation station" is the place from which asurvival craft is boarded. An embarkation station may also serve as amuster station, provided there is sufficient room, and the muster station activities can safely take place there . . 4 "Float-free launching" is that method of launching asurvival craft whereby the craft is automatically released from asinking craft and is ready for use . . 5 "Free-fall launching" is that method of launching asurvival craft whereby the craft with its complement of persons and equipment on board is released and allowed to fall into the sea without any restraining apparatus • . 6 "Immersion suit" is aprotective suit which reduces the body heat-loss of aperson wearing it in cold water . - equipment on board is released and allowed to fall into the sea without any restraining apparatus • . 6 "Immersion suit" is aprotective suit which reduces the body heat-loss of aperson wearing it in cold water . . 7 "Inflatable appliance" is an appliance which depends upon non-rigid, gas-filled chambers for buoyancy and which is normally kept uninflated until ready for use . . 8 "Inflated appliance" is an appliance which depends upon non-rigid, gas-filled chambers for buoyancy and which is normally kept inflated and ready for use at all times . . 9 "Launching appliance or arrangement" is ameans of transferring asurvival craft or rescue boat from its stowed position safely to the water . . 10 "Marine evacuation system"(MES) is an appliance designed to rapidly transfer large number of persons from an embarkation station by means of apassage to afloating platform for subsequent embarkation into associated survival craft or direc
