Contingency
actions
Long-term actions
an elevated risk of
biofouling.
If the idle time is
beyond the guarantee
of the AFS supplier,
the risk of biofouling
accumulation
increases.
The risk also depends
on biofouling
pressure, e.g.
temperature and
distance to the
coastline. If the ship is
idle in an area far
from shore (>200 nm
and >200 m depth)
and far from other
installations, the risk
may still be
considered low.>
conducted, sea
chests could be
blanked off or, when
recommended by the
AFS manufacturer,
more frequent
proactive cleaning
activities could be
implemented.
If the idle time is
beyond the
guarantee of the
AFS supplier, an
inspection should be
carried out.>
to the next
dry-docking.>
<EXAMPLE>
<Performance loss as
per Performance
Monitoring System>
<EXAMPLE>
<Performance
monitoring may detect
biofouling growth on
the hull, but not
necessarily in niche
areas.
Performance

<Performance loss as per Performance Monitoring System>
<EXAMPLE>
<Performance monitoring may detect biofouling growth on the hull, but not necessarily in niche areas.
Performance monitoring of fuel consumption may give indication on possible biofouling accumulation on the hull and may include the following methods:
.1 Sensors and collecting high-frequency data.
.2 Semi-automatic or manual
<EXAMPLE>
<When the data show a trend in performance loss over time, the time since last cleaning activity in combination with operating profile should be evaluated to determine if an inspection should be carried out.>

<EXAMPLE>
<Experience from fuel consumption and cleaning activity over time may lead to optimization and changes to the cleaning schedule.>

Biofouling risk parameters to monitor
Evaluation of a deviation including deviation limit of the risk parameter
Contingency actions
Long-term actions
calculations using data collected from ship's crew (e.g. noon reports).
.3 Speed trials and comparing the performance data with previous speed trial reports.

<Percentage of the speed loss and percentage of increased fuel consumption, that may indicate light biofouling on the ship>.>
<EXAMPLE>
<Downtime/malfunction of proactive cleaning >
<EXAMPLE>
<When proactive cleaning is implemented as part of the AFS, long periods of downtime could lead to

increased risk of
biofouling growth.>
<EXAMPLE>
<More frequent
inspections of
relevant areas
