6.4.2 The NO x emission value (g/kWh) calculated in accordance with paragraph 6.4.1 of these Guidelines should be compared to the applicable emission limit. This emission value is entered into 1.9.6 of the Supplement to the EIAPP certificate (appendix I of NTC 2008).

6.5 Test report to be submitted to the Administration
The test report referenced under paragraphs 6.2.2 and 6.3.5 of these Guidelines, together with the data from section 6.4 of these Guidelines should be consolidated into the overall documentation to be submitted to the Administration.
7 ONBOARD CONFIRMATION TEST FOR SCHEME B
7.1 After installation on board of an engine system fitted with SCR and before entry into service an initial confirmation test should be performed on board.
7.2 The engine system fitted with the SCR should be verified as corresponding to the description given in the Technical File.
7.3 The confirmation test should be undertaken as close as possible to 25%, 50% and 75% of rated power, independent of test cycle.
7.4 At each mode point of the confirmation test the operating values as given in the Technical File should be verified.
7.5 NOx emission concentrations should be measured at the inlet and outlet of the SCR chamber. The NOx reduction rate should be calculated. Both values should either be dry or wet. The value obtained for NOx reduction rate should be compared to the initial confirmation

SCR chamber. The NOx reduction rate should be calculated. Both values should either be dry or wet. The value obtained for NOx reduction rate should be compared to the initial confirmation
test required value at each mode point as given in the Technical File. Reduction efficiency values obtained at each of the test points should not be less than the corresponding values as given in the Technical File by more than 5%.
7.6 The NOx analyser should meet the requirements of chapter 5 of NTC 2008.
7.7 When an engine system fitted with SCR is in a group defined in chapter 4 of these Guidelines, the confirmation test should be conducted only for the parent engine system of the group. Where the parent engine system of the group is not the first one to complete the onboard confirmation test as required by chapter 7 of these Guidelines, the onboard confirmation test is to be done for all installed engine systems within the engine group unless it is an identical NO x specification member engine or the paren t engine system has been installed and tested successfully. Where the parent engine system is not available to be

it is an identical NO x specification member engine or the paren t engine system has been installed and tested successfully. Where the parent engine system is not available to be

installed on board, the first installed member engine system of the engine group can be chosen and adjusted to the worst-case NOx emission for confirmation test on board instead. The test results should be verified as described in the Technical File.

NOTING that regulation 28. 5 of MARPOL Annex VI requires CII reduction (Z) factors to be established for each ship type to which regulation 28 is applicable,
RECALLING that, at its seventy -sixth session, it adopted, by resolution MEPC.338(76), the 2021 Guidelines on the operational carbon intensity reduction factors relative to reference lines (CII reduction factors guidelines, G3), in which Z factors for the years 2027 to 2030 were not specified at the time of adoption,
NOTING that regulation 28.11 of MARPOL Annex VI requires that the review of CII regulations shall be completed by the Organization by 1 January 2026,
HAVING CONSIDERED, at its eighty-third session, draft amendments to the 2021 Guidelines on the operational carbon intensity reduction factors relative to reference lines (CII reduction factors guidelines, G3),
1 ADOPTS amendments to the 2021 Guidelines on the operational carbon intensity reduction factors relative to reference lines (CII reduction factors guidelines, G3), as set out in the annex to the present resolution;
2 INVITES Administrations to take the aforementioned amendments into account when

reduction factors relative to reference lines (CII reduction factors guidelines, G3), as set out in the annex to the present resolution;
2 INVITES Administrations to take the aforementioned amendments into account when developing and enacting national laws which give force to and implement requirements set forth in regulation 28.4 of MARPOL Annex VI;
3 REQUESTS the Parties to MARPOL Annex VI and other Member Governments to bring the annexed Guidelines to the attention of masters, seafarers, shipowners, ship operators and any other interested parties;
4 AGREES to keep the Guidelines under review in light of experience gained with their implementation and in light of the further review of the CII framework.
