Deadweight tonnage (DWT)3..

Power output (rated power) 4 of main and auxiliary reciprocating internal combustion engines over 130 kW (to be stated in kW) ..

1 Gross tonnage should be calculated in accordance with the International Convention on Tonnage Measurement of Ships, 1969

2 Net tonnage should be calculated in accordance with the International Convention on Tonnage Measurement of Ships, 1969. If not applicable, note N/A.

3 DWT means the difference in tonnes between the displacement of a ship in water of relative density of 1,025 kg/m3 at the summer load draught and the lightweight of the ship. The summer load draught should be taken as the maximum summer draught as certified in the stability booklet approved by the Administration or an organization recognized by it. If not applicable, note N/A.

4 Rated power means the maximum continuous rated power as specified on the nameplate of the engine.
