and tested to ensure and verify that it is sufficiently safeguarded against failures creating a hazardous situation in terms of:

.1 failure of components and systems;

.2 loss of any services to the diving unit; and

.3 inadvertent and intentional acts,

and to ensure that:

.4 the criticality of components and systems is identified;

.5 the designed level of redundancy is maintained throughout the service life; and

.6 mitigations are suitably documented and accessible to the operator.

2.4.3 In order to comply with the functional criteria of section 2.4.2 above, the following apply:

2.4.3 In order to comply with the functional criteria of section 2.4.2 above, the following apply:

.1 All services supporting the divers directly, including environmental control, should be considered as essential services as per SOLAS chapter II-1.

.2 The essential services listed in Part II of the DUSC should be specially considered in relation to the diving platform supply arrangements and all consumer demands.

.3 No single failure of a component, either static or dynamic, nor a single inadvertent act should lead to life-threatening situations for any person, or to unacceptable damage to facilities or the environment. However, w here a failure mode of a system or component cannot be addressed by redundancy, either:

.1 independent backup arrangements should be provided (e.g. in the case of umbilical separation); or
