RESOLUTION MSC.197(80)
(adopted on 20 May 2005)
AMENDMENTS TO THE GUIDELINES ON THE ENHANCED
PROGRAMME OF INSPECTIONS DURING SURVEYS OF BULK CARRIERS
AND OIL TANKERS (RESOLUTION A.744(18), AS AMENDED)- 22-
History of bulk cargoes of a corrosive natnre (e.g. high sulphur content)
Owner's inspections
3 Using a fonnat similar to that of the table below (which is given as an example),
the owner should provide details of the results of their inspections, for the last 3 years - in
accordance with the Guidelines - on all CARGO holds and BALLAST tanks and VOID
spaces within the cargo area.
TankIHold Corrosion Coating

"ANNEX 6
SURVEY REPORTING PRINCIPLES
As a principle, for bulk carriers subject to the Guidelines, the surveyor should include the
following contents in his report for survey of hull structure and piping systems, as
relevant for the survey.
1 General
l.l A survey report should be generated in the following cases:
.1 in connection with commencement, continuation and/or completion of
periodical hull surveys, i.e. annual, intermediate and renewal surveys, as
relevant;
.2 when structural damages/defects have been found;

.3 when repairs, renewals or modifications have been carried out; and
.4 when condition of class (recommendation) has been imposed or has been deleted.
1.2 The reporting should provide:
.1 evidence that prescribed surveys have been carried out in accordance with applicable requirements;
.2 documentation of surveys carried out with findings, repairs carried out and condition of class (recommendation) imposed or deleted;
.3 survey records, including actions taken, which should form an auditable documentary trail. Survey reports should be kept in the survey report file required to be on board;
.4 information for planning of future surveys; and
.5 information which may be used as input for maintenance of classification rules and instructions.
