storm water, with the nearby receiving wate rs and with storm water-conveyance systems. A site map should be developed that depicts such information.

Following compilation of the relevant site information, an assessment should be conducted in order to determine the appropriate control measures. Control measures should be implemented to reduce the threat of storm-water pollution, to control erosion and sediment and to protect nearby natural resources. Control measures can include best management practices, maintenance and inspection programmes, employee training and reporting.

As an example, a potential pollutant source at a Ship Recycling Facility is the storage of drums, tanks or other containers for the offloading of fuel from a ship. The activity of transferring and storing the fuel includes multiple potential pollutant sources, such as spills and leaks during transfer to the water or the ground, leaking drums or containers or run-off from the drum storage area. Control measures to minimize the risk to the environment from storm-water contamination could include storing drums and other containers under

from the drum storage area. Control measures to minimize the risk to the environment from storm-water contamination could include storing drums and other containers under semi-permanent or permanent coverings, controlling spills or run-off from drum storage areas with appropriately sized secondary containment, conducting routine inspections of drum storage areas and establishing appropriate clean-up procedures in the event of spills or leaks.

The development of preventive measures is the most effective way to minimize the discharge of pollutants via storm water. It is important to maintain records on maintenance, inspections and employee training. Periodic review of the storm-water management programme is also an effective tool for determining which best management practices are fulfilling their intended function and for identifying weaknesses in the programme.

3.4.4.3 Debris prevention and control

The introduction of debris into the marine environm ent by ship recycling activities has the potential to adversely affect the environment. The SRFP should include a programme that

3.4.4.3 Debris prevention and control

The introduction of debris into the marine environm ent by ship recycling activities has the potential to adversely affect the environment. The SRFP should include a programme that defines measures to be implemented and maintained to minimize the potential for debris deposition into the water, including the maintenance of areas from which debris might be transported into the marine environment by wind, storm drains, tides or run-off. Control measures should be implemented to reduce the likelihood of debris deposition.

3.4.4.4 Incident and spills reporting procedures

The SRFP should describe the procedures for reporting incidents and spills, including at a minimum the following information:

how duties and responsibilities are assigned to the Ship Recycling Facility's responsible team, department or persons and their reporting responsibilities in the event of an incident;

APPENDIX 1

RECOMMENDED FORMAT OF THE
SHIP RECYCLING FACILITY PLAN

SHIP RECYCLING FACILITY PLAN

1 Facility management

1.1 Company information
1.2 Training programme
1.3 Worker management
1.4 Records management

2 Facility operation

2.1 Facility information
2.2 Permits, licences and certification
2.3 Acceptability of ships
2.4 Ship Recycling Plan (SRP) development
2.5 Vessel arrival management
2.6 Ship recycling methodology
2.7 Reporting upon completion

3 Worker safety and health compliance approach

---CHUNK---

SOURCE: MEPC.210(63).pdf
2.3 Acceptability of ships
2.4 Ship Recycling Plan (SRP) development
2.5 Vessel arrival management
2.6 Ship recycling methodology
2.7 Reporting upon completion

3 Worker safety and health compliance approach

3.1 Worker health and safety
3.2 Key safety and health personnel
3.3 Job hazard assessment
3.4 Prevention of adverse effects to human health
 3.4.1 Safe-for-entry procedures
  3.4.1.1 Safe-for-entry criteria
  3.4.1.2 Competent person for Safe-for-entry determination
  3.4.1.3 Safe-for-entry inspection and testing procedures
  3.4.1.4 Oxygen
  3.4.1.5 Flammable atmospheres
3.4.1.6 Toxic, corrosive, irritant or fumigated atmospheres and residues
  3.4.1.7 Safe-for-entry determination by a Competent person
  3.4.1.8 Safe-for-entry certificate, warning signs and labels
  3.4.1.9 Safe-for-entry operational measures
 3.4.2 Safe-for-hot-work procedures
  3.4.2.1 Safe-for-hot-work criteria
  3.4.2.2 Competent person for Safe-for-hot-work determination
  3.4.2.3 Safe-for-hot-work inspection, testing and determination
  3.4.2.4 Safe-for-hot-work certificate, warning signs and labels
  3.4.2.5 Safe-for-hot-work operational measures

---CHUNK---

3.4.2.2 Competent person for Safe-for-hot-work determination
  3.4.2.3 Safe-for-hot-work inspection, testing and determination
  3.4.2.4 Safe-for-hot-work certificate, warning signs and labels
  3.4.2.5 Safe-for-hot-work operational measures
 3.4.3 Welding, cutting, grinding and heating
 3.4.4 Drums, containers and pressure vessels
 3.4.5 Prevention of falling from heights and accidents caused by falling

3.4.8 Maintenance and decontamination of tools and equipment
3.4.9 Health and sanitation
3.4.10 Personal protective equipment
3.4.11 Worker exposure and medical monitoring
3.5 Emergency preparedness and response plan
3.6 Fire and explosion prevention, detection and response

4 Environmental compliance approach

4.1 Environmental monitoring
4.2 Management of Hazardous Materials
4.2.1 Potentially containing Hazardous Materials
4.2.2 Additional sampling and analysis
