bulky and contaminated with target and non-target species, including invasive aquatic species and fouling organisms;
- passenger vessels these generally have larger volumes of garbage and sewage compared to the general merchant fleet; and
- recreational vessels may lack or have limited pollution prevention equipment, for example smaller holding tanks and garbage storage areas, basic or no sewage treatment, no bilge water treatment.

11 For a successful regional approach, it is also important to understand the overall voyage pattern of ships calling at ports in the region. Therefore, an RRFP should take account of routes and ports of call, including origin and destination outside the region. A ship should not need to deviate from its route for the sole purpose of accessing port reception facilities. Aspects of routing and voyage planning that might affect the amount of ship generated wastes and cargo residues on board ships arriving in a particular region or port, and/or the need to clear ship generated wastes and cargo residues storage spaces prior to the onward journey, include:

- voyage through a Special Area where certain ship generated wastes and cargo

---CHUNK---

SOURCE: MEPC.221(63).pdf
and/or the need to clear ship generated wastes and cargo residues storage spaces prior to the onward journey, include:

- voyage through a Special Area where certain ship generated wastes and cargo residues may not be allowed to be discharged into the sea;
- voyage through a Particularly Sensitive Sea Area where associated protective measures include additional discharge restrictions;
- periods of anchorage prior to entering a port, during which ship generated wastes and cargo residues may accumulate on board; and
- average times spent in each port, which may provide greater or lesser opportunities to discharge ship generated wastes and cargo residues.

12 Additional considerations There may be other factors that influence the demand for port reception facilities in a region or a particular port. For example, quarantine requirements within a region, in a particular port, or at the onward destination, may necessitate particular means of waste handling on board and/or in port (e.g. compulsory discharge to shore, incineration requirements, cleaning or disinfection, fumigation). Increased

necessitate particular means of waste handling on board and/or in port (e.g. compulsory discharge to shore, incineration requirements, cleaning or disinfection, fumigation). Increased

shipboard collection and segregation of recyclable and reusable materials may also influence demand for port reception facilities.

13 All ports in the region, including type and available facilities The RRFP should contain a thorough assessment of the port reception facilities at all ports and terminals within the region. Several IMO documents and publications provide detailed information on what constitutes adequate facilities and how adequacy can be assessed. An assessment should also be made of any opportunities to provide adequate port reception facilities where such facilities are not already available.

14 Identification of the selected Regional Ships Waste Reception Centres (RSWRC)
Based on the foregoing assessments and considerations, an RRFP should identify which

14 Identification of the selected Regional Ships Waste Reception Centres (RSWRC)
Based on the foregoing assessments and considerations, an RRFP should identify which ports would be Regional Ships Waste Reception Centres (RSWRC). In general, these should be the ports where facilities are adequate to receive all types of ship generated wastes and cargo residues, including any ship generated wastes and cargo residues remaining on board a ship that has visited a port within the region where ship generated wastes and cargo residues cannot be delivered. RSWRCs should be located so as to be convenient according to the prevailing shipping patterns. This means that ships should not be forced to deviate from their voyage for the sole purpose of delivering ship generated wastes and cargo residues to shore. RSWRCs should be located so that ships can deliver ship generated wastes and cargo residues during normal port visits that is, where the ship would otherwise have visited for the purposes of unloading, loading, provisioning or lay-up.

15 Identification of ports with limited facilities (PLF) Based on the foregoing

---CHUNK---

would otherwise have visited for the purposes of unloading, loading, provisioning or lay-up.

15 Identification of ports with limited facilities (PLF) Based on the foregoing assessments, an RRFP should identify which ports have limited facilities (PLF).

16 Identification of a central point of contact A central point of contact should be identified in an RRFP whose role should include:

- maintaining a current version of the RRFP;
- receiving and, where appropriate responding to or redirecting, inquiries about an RRFP;
- facilitating discussions between government, shipping and waste industry stakeholders regarding an RRFP;
- providing consistent information to government, shipping and waste industry stakeholders regarding an RRFP; and
- instigating periodic reviews of an RRFP.

17 Other functions could also be assigned to the central point of contact, depending on the size and complexity of an RRFP.

18 It is suggested that a government agency or authority, rather than an individual person, is nominated as the central point of contact to encourage continuity through any staff

the size and complexity of an RRFP.

18 It is suggested that a government agency or authority, rather than an individual person, is nominated as the central point of contact to encourage continuity through any staff
changes. The central point of contact should also be able to respond to enquiries in a timely manner. Hours of contact should be at least the business hours of the agency or authority.

19 Identification of stakeholder roles and responsibilities this should list stakeholders and describe their roles and responsibilities in implementing or operating in a region covered by an RRFP. A generic example is provided below, but should be modified and/or expanded upon to address specific arrangements within a region.

Stakeholder Examples of roles/responsibilities
Regulators
(e.g. environment protection
agencies, quarantine
authorities, maritime
authorities)
- Enforcing legislation related to the prevention of pollution from ships, management of ship generated

SOURCE: MEPC.221(63).pdf
Regulators
(e.g. environment protection
agencies, quarantine
authorities, maritime
authorities)

- Enforcing legislation related to the prevention of pollution from ships, management of ship generated wastes and cargo residues.
- Licensing waste service providers.
- Providing current information to the Organization, including updating GISIS, with respect to port reception facilities.

Port users (e.g. ships agents, masters)

- Maintaining an awareness of how to access information on RSWRCs, PLFs and indi vidual port reception facilities in ports.
- Providing timely advance notification of the need to access port reception facilities.
- Submitting formal reports of alleged inadequacies of port reception facilities where appropriate.

Waste service providers - Operating in accordance with relevant legislation.

- Collecting ship generated wastes and cargo residues from vessels and transport ing it to storage or disposal point.
- Treating, reusing, recycling, destroying or otherwise managing ship generated wastes and cargo residues collected by waste transporters.
