2.2.1 The tasks are allocated to, and operated by the operator on, a defined set of multi-functional “task stations”.

2.2.2 The scope of an INS may differ dependent on the number and kind of tasks integrated.

2.2.3 Configuration, use, operation and display of the INS is situation-dependent on:

- shift underway, at anchor, and moored,
- manual and automatic navigation control in different waters,
- planned routine navigation and special manoeuvres.

3 Application of these performance standards

3.1 Purpose of these standards

- shift underway, at anchor, and moored,
- manual and automatic navigation control in different waters,
- planned routine navigation and special manoeuvres.

3 Application of these performance standards

3.1 Purpose of these standards

3.1.1 The purpose of these performance standards is to support the proper and safe integration of navigational functions and information.

3.1.2 The purpose is in particular:

- to allow the installation and use of an INS instead of stand-alone navigational equipment onboard ships; and
- to promote safe procedures for the integration process;

both for

- comprehensive integration; and
- partial integration,

of navigational functions, data and equipment.

3.1.3 These standards supplement for INS f unctional requirements of the individual Performance Standards adopted by the Organization.

3.2 Application to tasks

3.2.1 These performance standards are applicable to systems where functions/equipment of at

3.2 Application to tasks

3.2.1 These performance standards are applicable to systems where functions/equipment of at least the navigational tasks mentioned in paragraph 2.1.2 are combined.

3.2.2 If further tasks are integrat ed, the requirements of these st andards should apply to all additional functions implemented in the INS.

3.3 Modules of these standards

3.3.1 These performance standards are based on a modular concept whic h should provide for individual configurations and for extensions, if required.

3.3.2 These standards contain four modules:

Module A for the requirements for the integration of navigational information,
Module B for the operational/functional requirements for INS based on a task-related structure,
Module C for the requirements of the Alert management, and
Module D for the Documentation requirements.

3.4 Application of modules

These performance standards are applicable to all INS as follows:

3.4.1 Modules A, C, D and paragraphs 6, 8 to 13 of module B are applicable for any INS.

Module D for the Documentation requirements.

3.4 Application of modules

These performance standards are applicable to all INS as follows:

3.4.1 Modules A, C, D and paragraphs 6, 8 to 13 of module B are applicable for any INS.

3.4.2 Additionally, for each task integrated in to the INS, the INS should fulfil both:

the requirements of the respective tasks as specified in paragraph 7 of module B and
the relevant modules of performance standards for stand-alone equipment as specified in Table 1.

Table 1
INS Tasks and functions (Para of this
standard)
Additionally applicable modules of specific equipment standards for
task integrated into the INS. The modules are specified in the
appendices of these performance standards, if not specified in the
equipment standards.
Collision avoidance (7.4)

3.5 Acceptance of INS as navigational equipment

3.5.1 These standards may allow for accepting INS to substitute for some carriage requirements of navigational equipment as equivalent to other means under SOLAS regulation V/19. In this case, the INS should comply with:

these performance standards; and
for the relevant tasks of these performance standards, with the a pplicable modules of the equipment performance standards as specified in Table 2.
