CHARTLETS AND A GENERAL DESCRIPTION OF AREA TO BE AVOIDED
IN THE CORAL SEA

The area lies off the north-east coast of Australia, within the PSSA in the south-west Coral Sea (figure 1). It encompasses a multitude of reefs, shoals and islets that lie generally to the north-east of the Great Barrier Reef (GBR), between Palm and Hydrographers Passage (figure 2).

Sea (figure 1). It encompasses a multitude of reefs, shoals and islets that lie generally to the north-east of the Great Barrier Reef (GBR), between Palm and Hydrographers Passage (figure 2).

In order to reduce the risk of a maritime casualty and potential damage to the sensitive marine environment, transiting ships should not enter the ATBA. The ATBA will result in minor changes to the traffic pattern for ships that are required to conform to SOLAS requirements. Some of these ships (e.g. cruise ships) which demonstrate an operational need to visit a location within the ATBA and which have adequate risk mitigation measures in

place may enter the ATBA.

The ATBA is recommendatory in nature.

The ATBA extends over approximately 25,250 square nautical miles and encompasses many reefs, cays, islets, sandbars and shoal patches (figure 3). The 21 recognized, named and charted features that are within the ATBA boundary include:

Abington Reef;
Central Diamond Islet;
Chilcott Islet;
Dart Reef;
Diane Bank;
East Diamond Islet;
Flinders Reefs;
Flora Reef;
Herald Cays;
Herald Surprise; and
Holmes Reefs;
Magdelaine Cays;
Malay Reef;
