water/kg of feedstock produced or per MJ respectively.
7. Air

Production of sustainable marine fuels minimizes negative impacts on air quality.
1. The marine fuel is made in a facility that fully complies with all local, national and regional air pollution laws and regulations.
8. Soil

Production of sustainable marine fuels maintain or enhance soil health.
1. Agricultural and forestry best management practices for feedstock production or residue collection have been implemented to maintain or enhance soil health, such as physical, chemical and biological conditions; and
2. The marine fuel is made in a facility that fully

complies with all local,
national and regional
laws and regulations
about soil health.
9. Waste and chemicals

Production of sustainable
marine fuels maintain or
enhance responsible
management of waste and
use of chemicals.
1. Operational practices are
implemented to ensure
that waste arising from,
and chemicals used in,
production processes are
minimized at storage,
handling and disposal
steps. Reuse or recycling
of chemicals and waste is

Theme/aspect Principle/Objective Metric/Indicator
encouraged.
2. Procedures are in place
to minimize the use of
materials that are neither
recyclable nor
biodegradable;
3. Average (in tonnes) of
hazardous wastes
generated per MJ of fuel
produced; and
4. Average (in tonnes) of
specified industrial

chemicals consumed per MJ of fuel produced.

10. Conservation

Production of sustainable marine fuels maintain or enhance biodiversity and ecosystems, or conservation services.

1. The marine fuel is not made from feedstock obtained from areas that due to their biodiversity, conservation value, or ecosystem services, are protected by the State having jurisdiction over the area. Evidence is provided that the activity does not interfere with the

obtained from areas that due to their biodiversity, conservation value, or ecosystem services, are protected by the State having jurisdiction over the area. Evidence is provided that the activity does not interfere with the protection purposes; and

2. Low invasive-risk feedstock is selected for cultivation and appropriate controls are adopted with the intention of preventing the uncontrolled spread of cultivated alien species and modified microorganisms.

8 FUEL LIFECYCLE LABEL (FLL)

8.1 The FLL is a technical tool to collect and convey the information relevant for the life

cycle assessment of marine fuels and energy carriers (e.g. electricity for shore power) used for ship propulsion and power generation onboard in the context of these guidelines.

8.2 The FLL consists of five main parts, as illustrated below:

Part A-1 Part A-2 Part A-3 Part A-4 Part A-5
Fuel type
(blend)
Fuel Pathway
Code
Lower Calorific
Value (LCV,
MJ/g)
share in fuel blend
