Reference to supporting photos/videos for fouling inspection and assessment of AFC/MGPS:

Signature of inspection organization or competent ship crew: .....

3 Entries in the report after biofouling management (reactive cleaning)

The following information should be recorded in the cleaning report:

Ship particulars:
- Ship name
- IMO number
Date and place of inspection
Name of cleaning company
All hull and niche areas cleaned/treated specified and documented in the report, including also areas not cleaned/treated
Cleaning equipment used for hull
Cleaning equipment used for niche areas
Inspection equipment used (including list of divers/ROV operators participating in the operation)
Conditions during cleaning inspection (i.e. duration, estimated visibility underwater)
Signature of authorized person of the cleaning company
Cleaning start and end times
Results:
- Type of biofouling after reactive cleaning (as per the ratings in table 1)
- Quantitative assessments of biofouling cover after cleaning (as per table 1)

Cleaning start and end times
Results:
- Type of biofouling after reactive cleaning (as per the ratings in table 1)
- Quantitative assessments of biofouling cover after cleaning (as per table 1)
AFC condition (unless assessed during inspection)
- The condition of the AFC should be observed during the cleaning activity and reported using the conditions as categorized in table 4
Photos/videos
- Photos and videos submitted or used in a digital assessment tool as evidence of hull cleaning
Capture
- Description of capture method
- Supporting evidence that dislodged material (by mass) has been captured as described in chapter 9
(Reference to equipment specification and validation test report may be sufficient)
Treatment* and/or disposal of waste material captured during cleaning should be described in the report. Evidence of delivery to waste management facility or facilities should be attached to the cleaning report. The biofouling waste should be disposed of and/or treated in a safe and environmentally sound manner, in accordance with local regulations, and ensure that the main objective of the Guidelines, to minimize the

and/or treated in a safe and environmentally sound manner, in accordance with local regulations, and ensure that the main objective of the Guidelines, to minimize the spread of invasive aquatic species, is safeguarded.

Treatment is any process designed to remove or deactivate any biofouling material and particulate or dissolved waste substances captured or produced during any stages of cleaning.
