collected from ship's crew (e.g. noon reports).
.3 Speed trials and comparing the performance data with previous speed trial reports.

<Percentage of the speed loss and percentage of increased fuel consumption, that may indicate light biofouling on the ship>.>
<EXAMPLE>
<Downtime/malfunction of proactive cleaning >
<EXAMPLE>
<When proactive cleaning is implemented as part of the AFS, long periods of downtime could lead to increased risk of biofouling growth.>
<EXAMPLE>
<More frequent inspections of relevant areas should be implemented until the proactive cleaning is back in operation. Maintenance or repair should be performed at earliest possible opportunity. If macrofouling accumulation is found (fouling rating 2), reactive cleaning with capture should be conducted before the proactive cleaning is put into

service again.>

programme.>

CAPTURE AND DISPOSAL OF WASTE

In-water reactive cleaning companies should arrange for capture of debris during cleaning. The biofouling waste should be disposed of and/or treated in a safe and environmentally sound manner, in accordance with local regulations, to ensure that the main objective of the Guidelines, to minimize the transfer of invasive aquatic species, is safeguarded.

Documenting evidence of collection/delivery of the wastes (a receipt) will be appended to the BFRB.

SAFETY PROCEDURES FOR THE SHIP AND THE CREW
