Ship recycling is an integral part of the circular economy of our seas.

IMO INTERNATIONAL MARITIME ORGANIZATION SENSREC

Ship recycling is an integral part of the circular economy of our seas.

Factors:

Effort

Time

Economic return

Ship Recycling: What Exactly Gets Recycled?

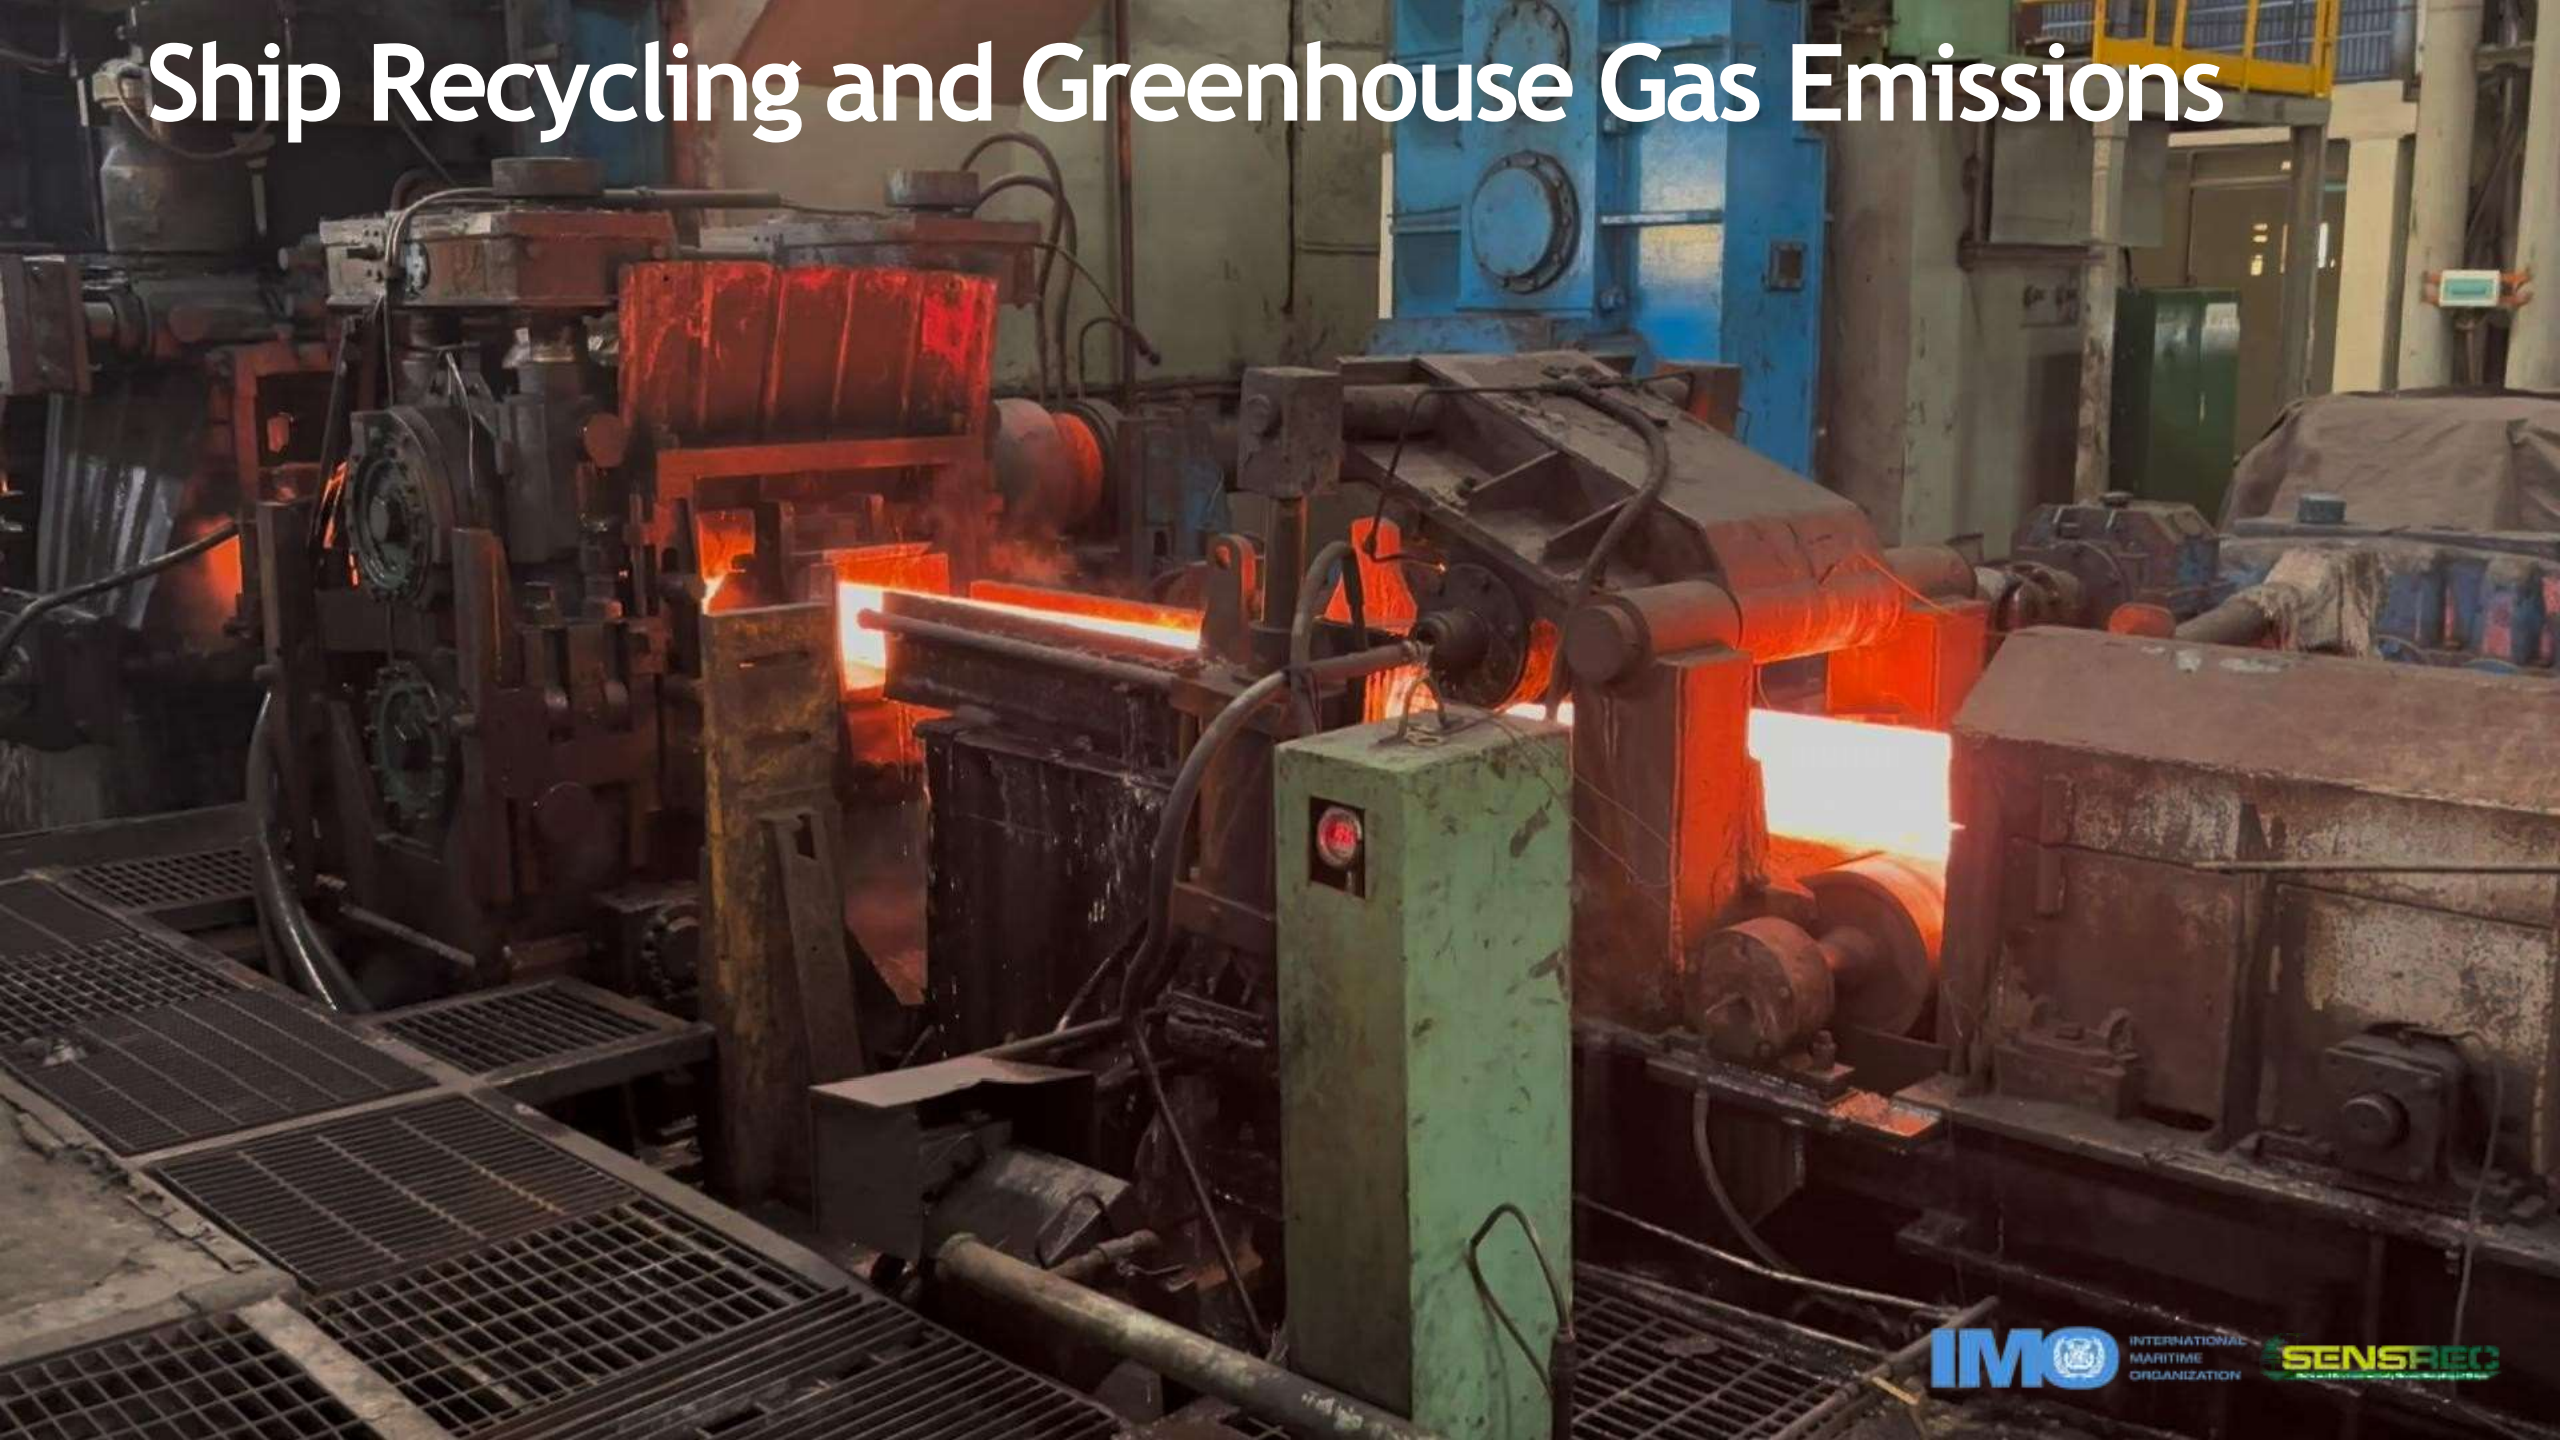

Recycled, reconditioned, or reused.

- Metals (steel, copper, aluminum, nickel, etc.)
- Furniture, fittings, and fixtures
- Equipment and electronic components

If done properly, only 4% is considered potentially hazardous waste.Recycled, reconditioned, or reused.

Ship Recycling and Greenhouse Gas Emissions

Ship Recycling and Greenhouse Gas Emissions

Recycled steel can save:

8G% of GHG emissions

7G% of water pollution

40% of water consumption

Fuente: Remaking steel for a net zero carbon circular economy. University College London, 2021

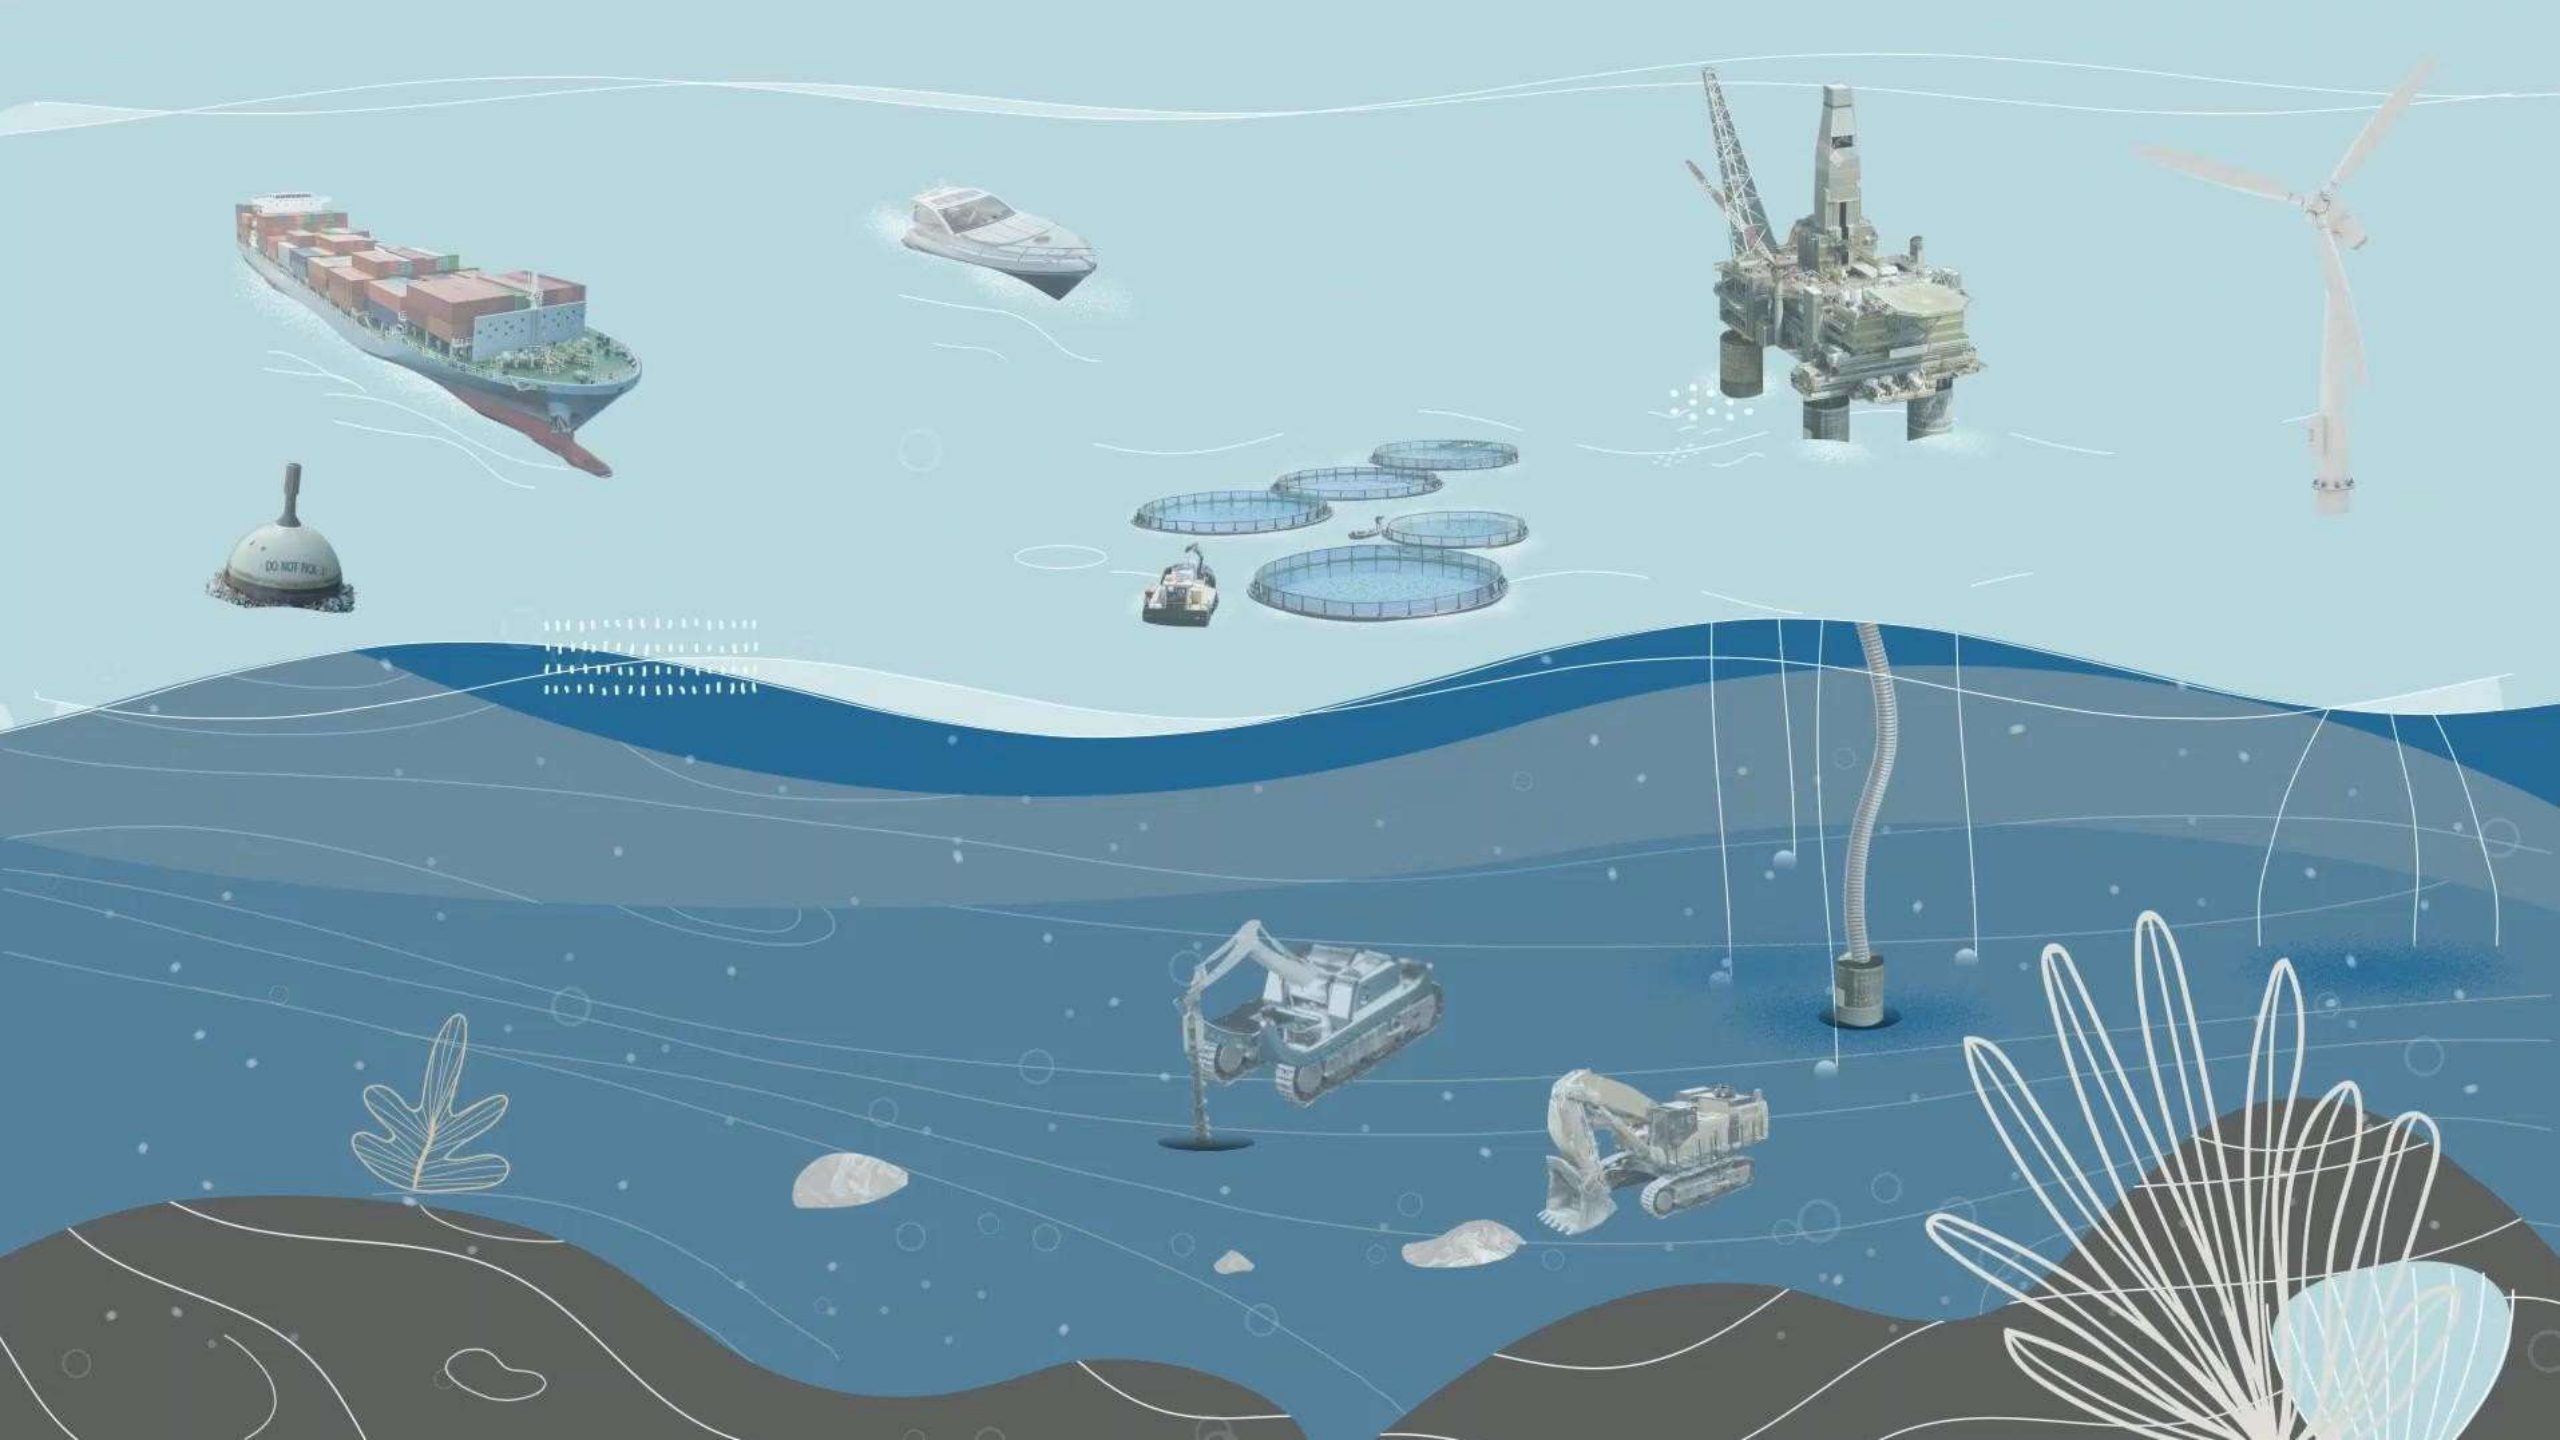

Technological Innovation for the Treatment of Potentially Hazardous Materials

- Mineral wool recycling

- Asbestos denaturation

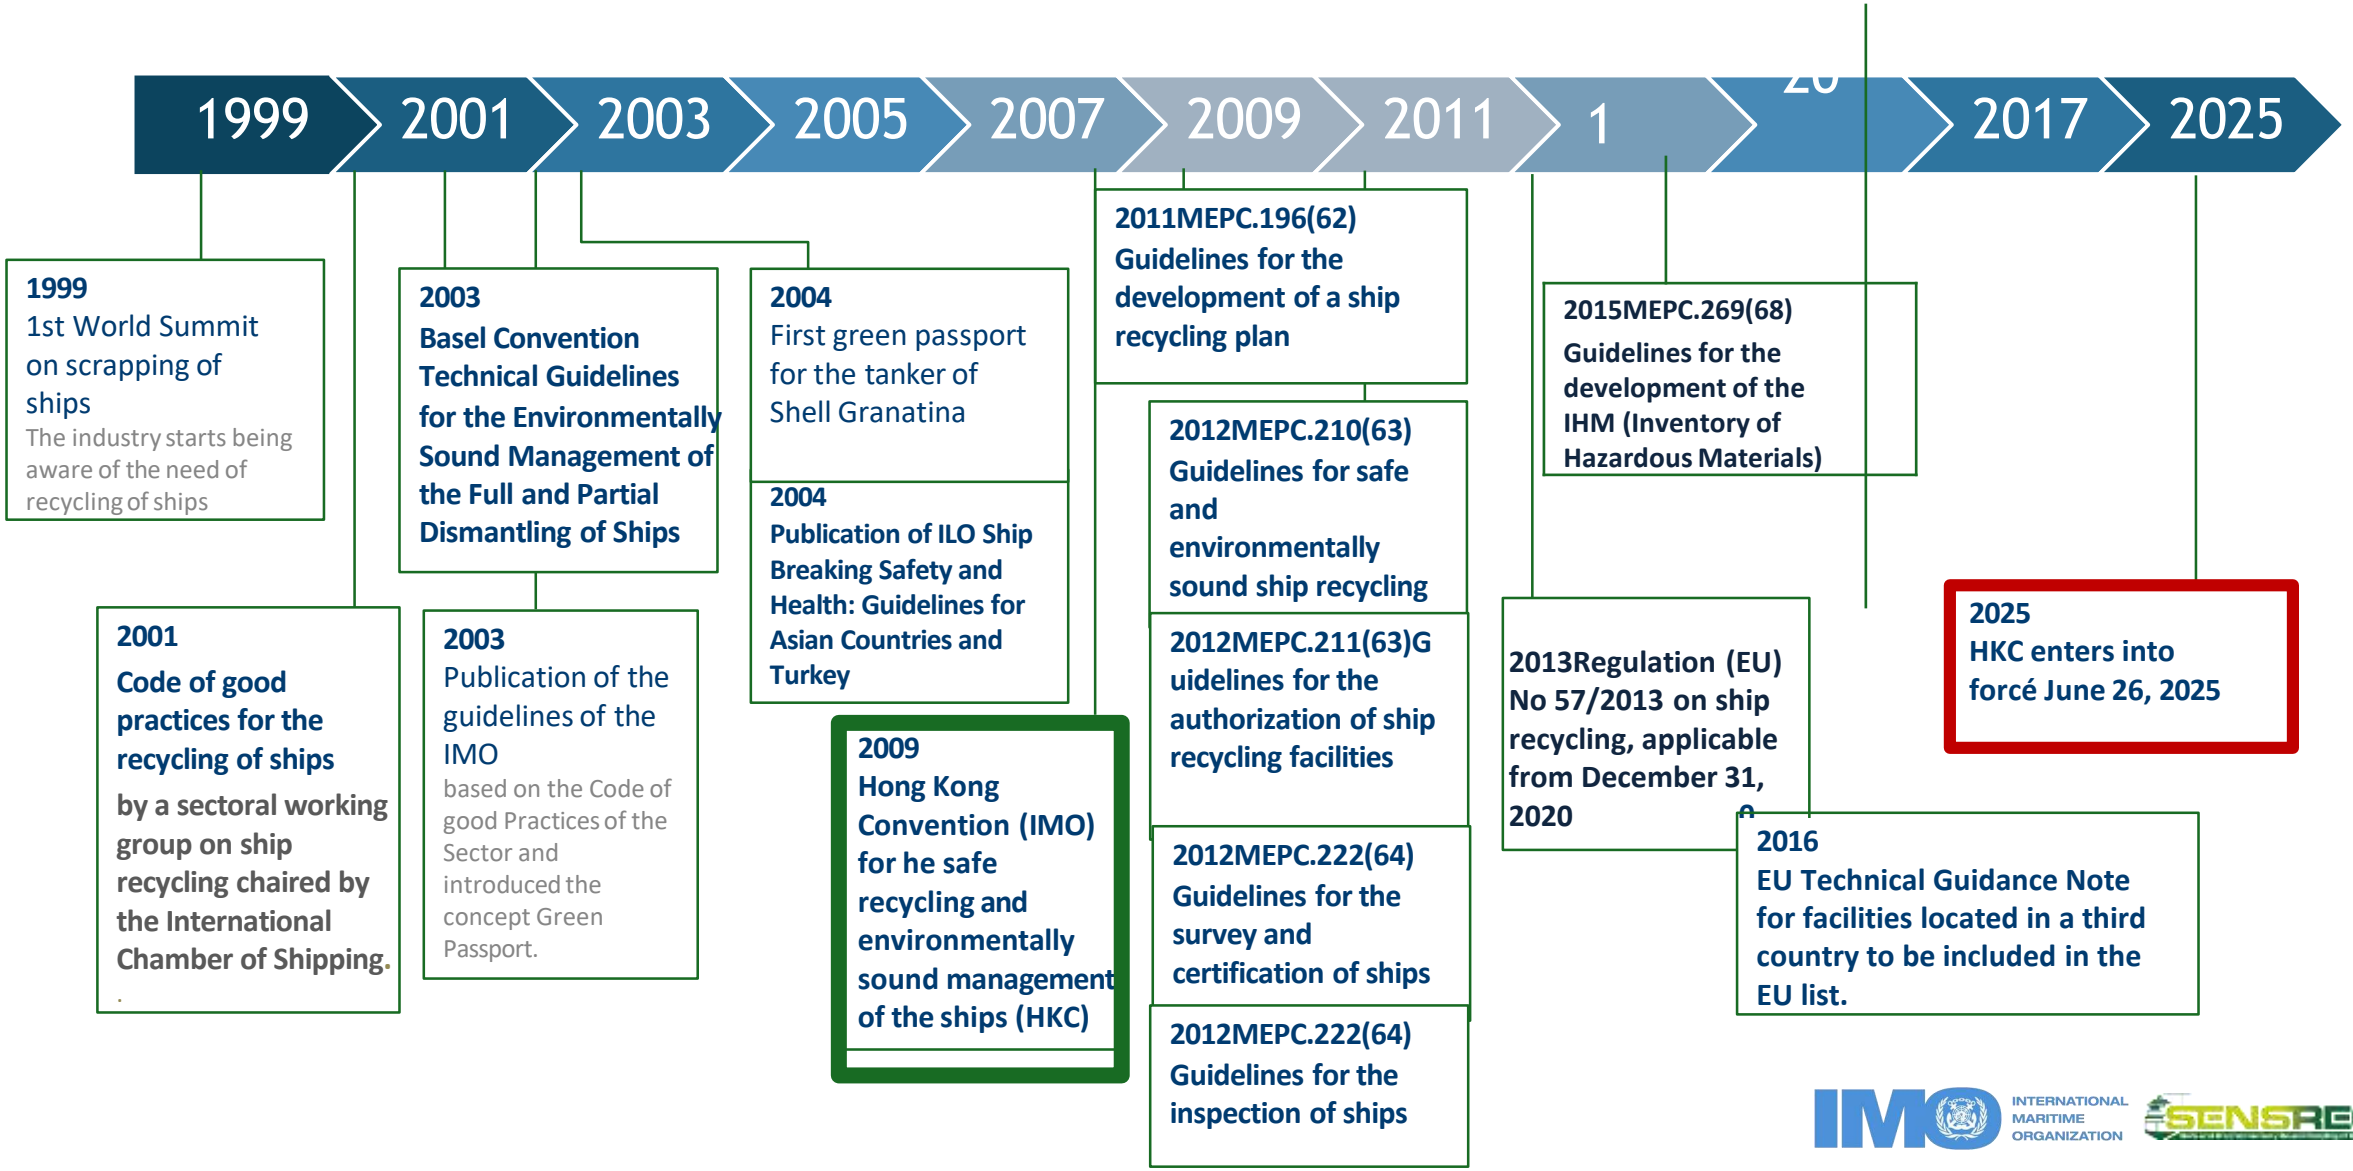

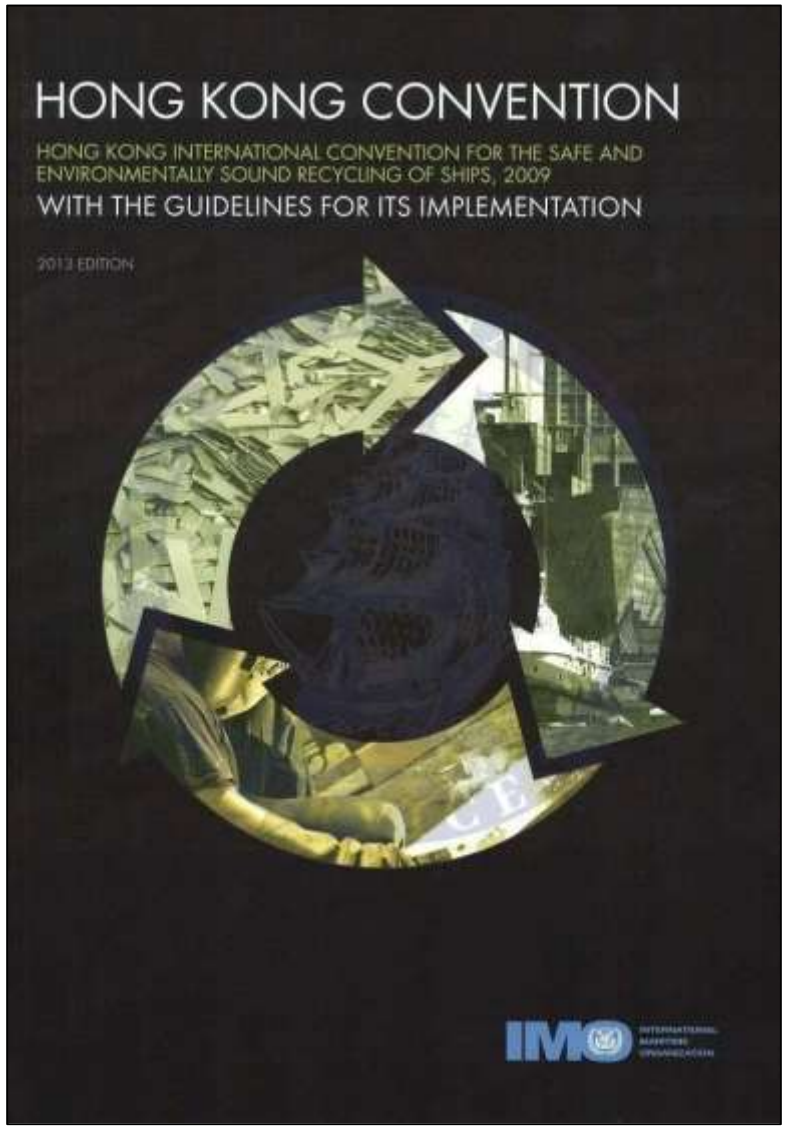

SHIPS

The path to regulation

The path to regulation

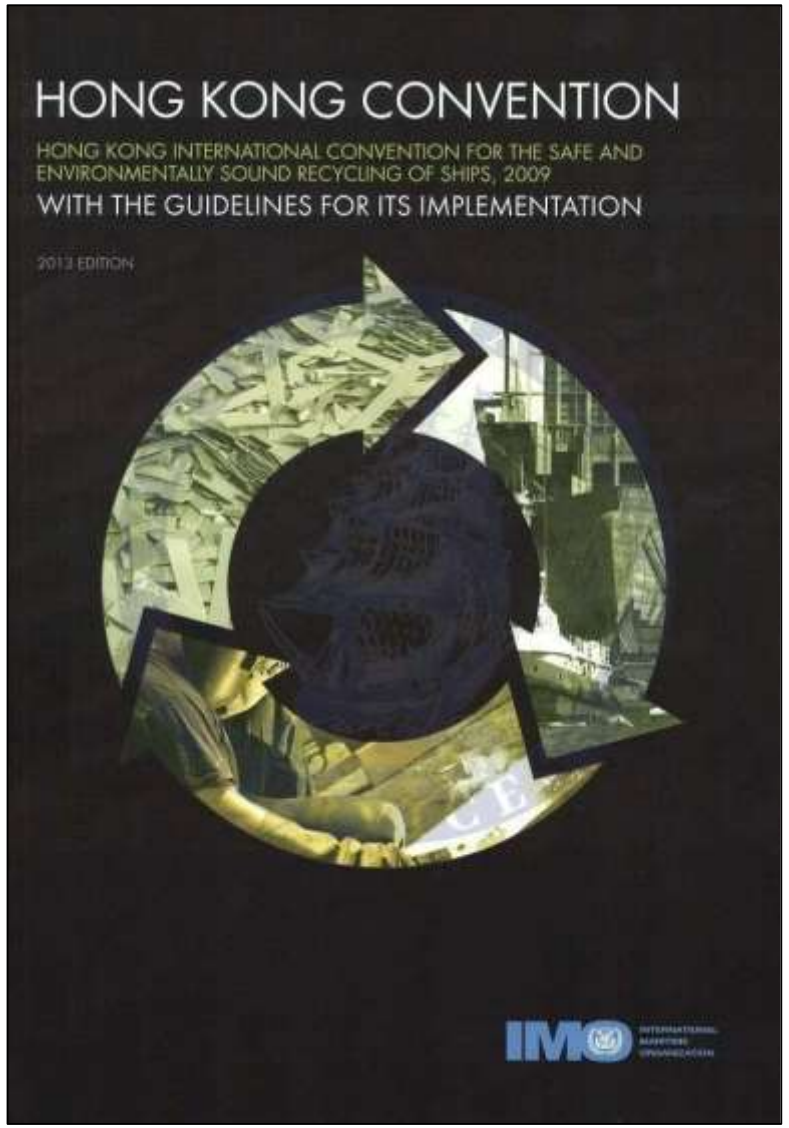

Hong Kong International Convention for the Safe and Environmentally Sound Recycling of Ships, 200GResponsibilities for:

Shipbuilders
Shipowners
Recycling facilities
National Authorities

Ships over 500GT must maintain an Inventory of Potentially Hazardous Materials (IHM)Ship recycling facilities will have to produce a "Ship Recycling Facility Plan"National Authorities will be responsible for authorizing these facilities and the recycling of each ship

IMO INTERNATIONAL MARITIME ORGANIZATION SENSREC

The path to regulation

Hong Kong International Convention for the Safe and Environmentally Sound Recycling of Ships, 200GIn addition to IMO Guidelines for……

the development of the Ship Recycling Plan
Resolution MEPC.196(62) 2011…

safe and environmentally sound ship recycling
Resolution MEPC.210(63) 2012…

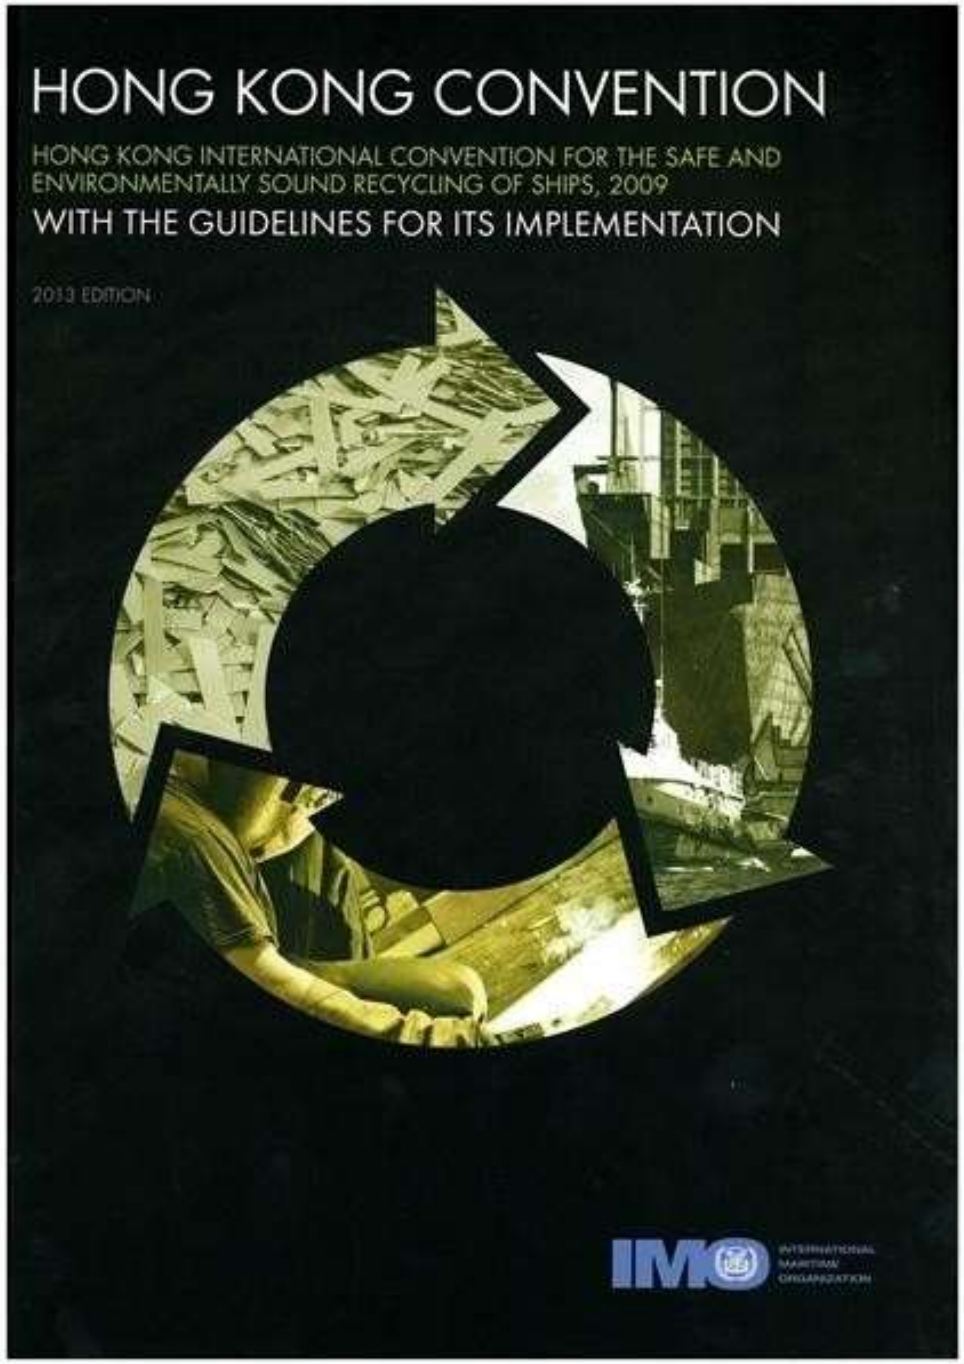

the authorization of ship recycling facilities
Resolution MEPC.211(63) 2012…

the recognition and certification of ships
Resolution MEPC.222(64) 2012…

the inspection of ships under the Hong Kong Convention
Resolution MEPC.223(64) 2012…

the preparation of the Inventory of Potentially Hazardous Materials
Resolution MEPC.379(80) 2023

IMO INTERNATIONAL MARITIME ORGANIZATION SENSREC

Under the Hong Kong Convention, Parties will have specific obligations (Regulation 20)

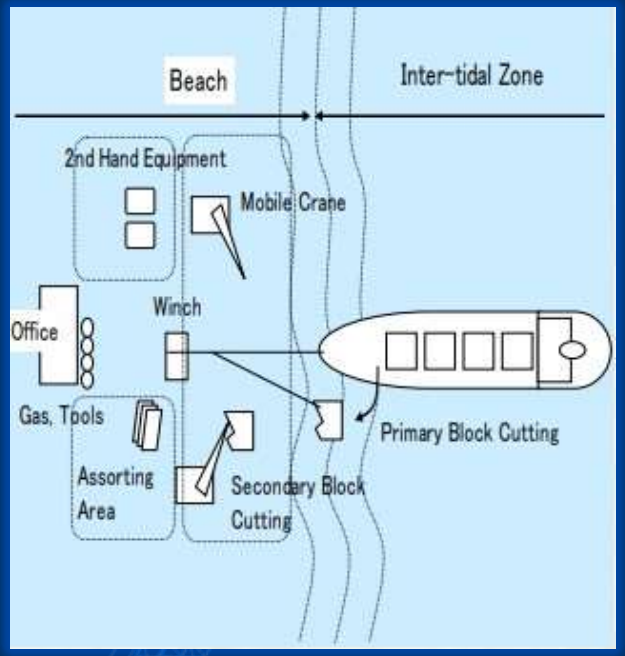

Potentially hazardous materials are removed from the ship in a safe and environmentally sound manner.

All hazardous materials listed in the ship's hazardous materials inventory are identified, labeled, and packaged at the shipyard in a safe and environmentally sound manner.

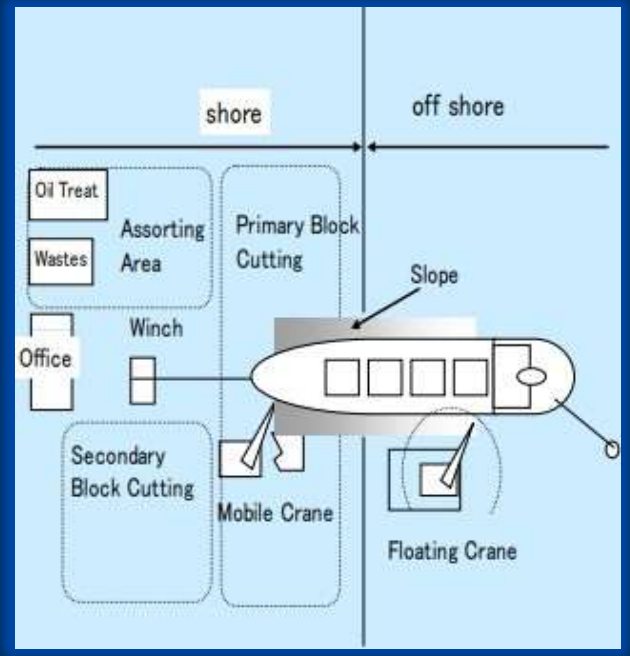

Waste management and disposal locations are identified to ensure the safe and environmentally sound management of materials.

IMO INTERNATIONAL MARITIME ORGANIZATION SENSREC

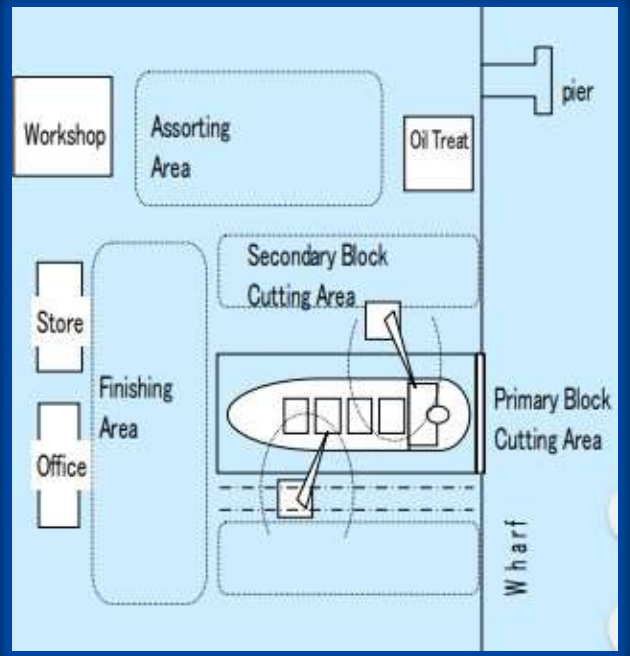

Hong Kong Convention: Recycling methods

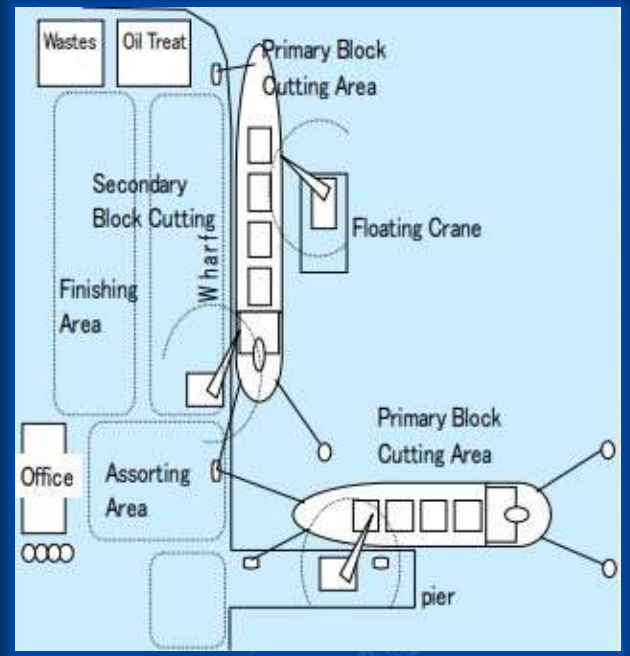

Beaching

Shipbreaking or Slipway

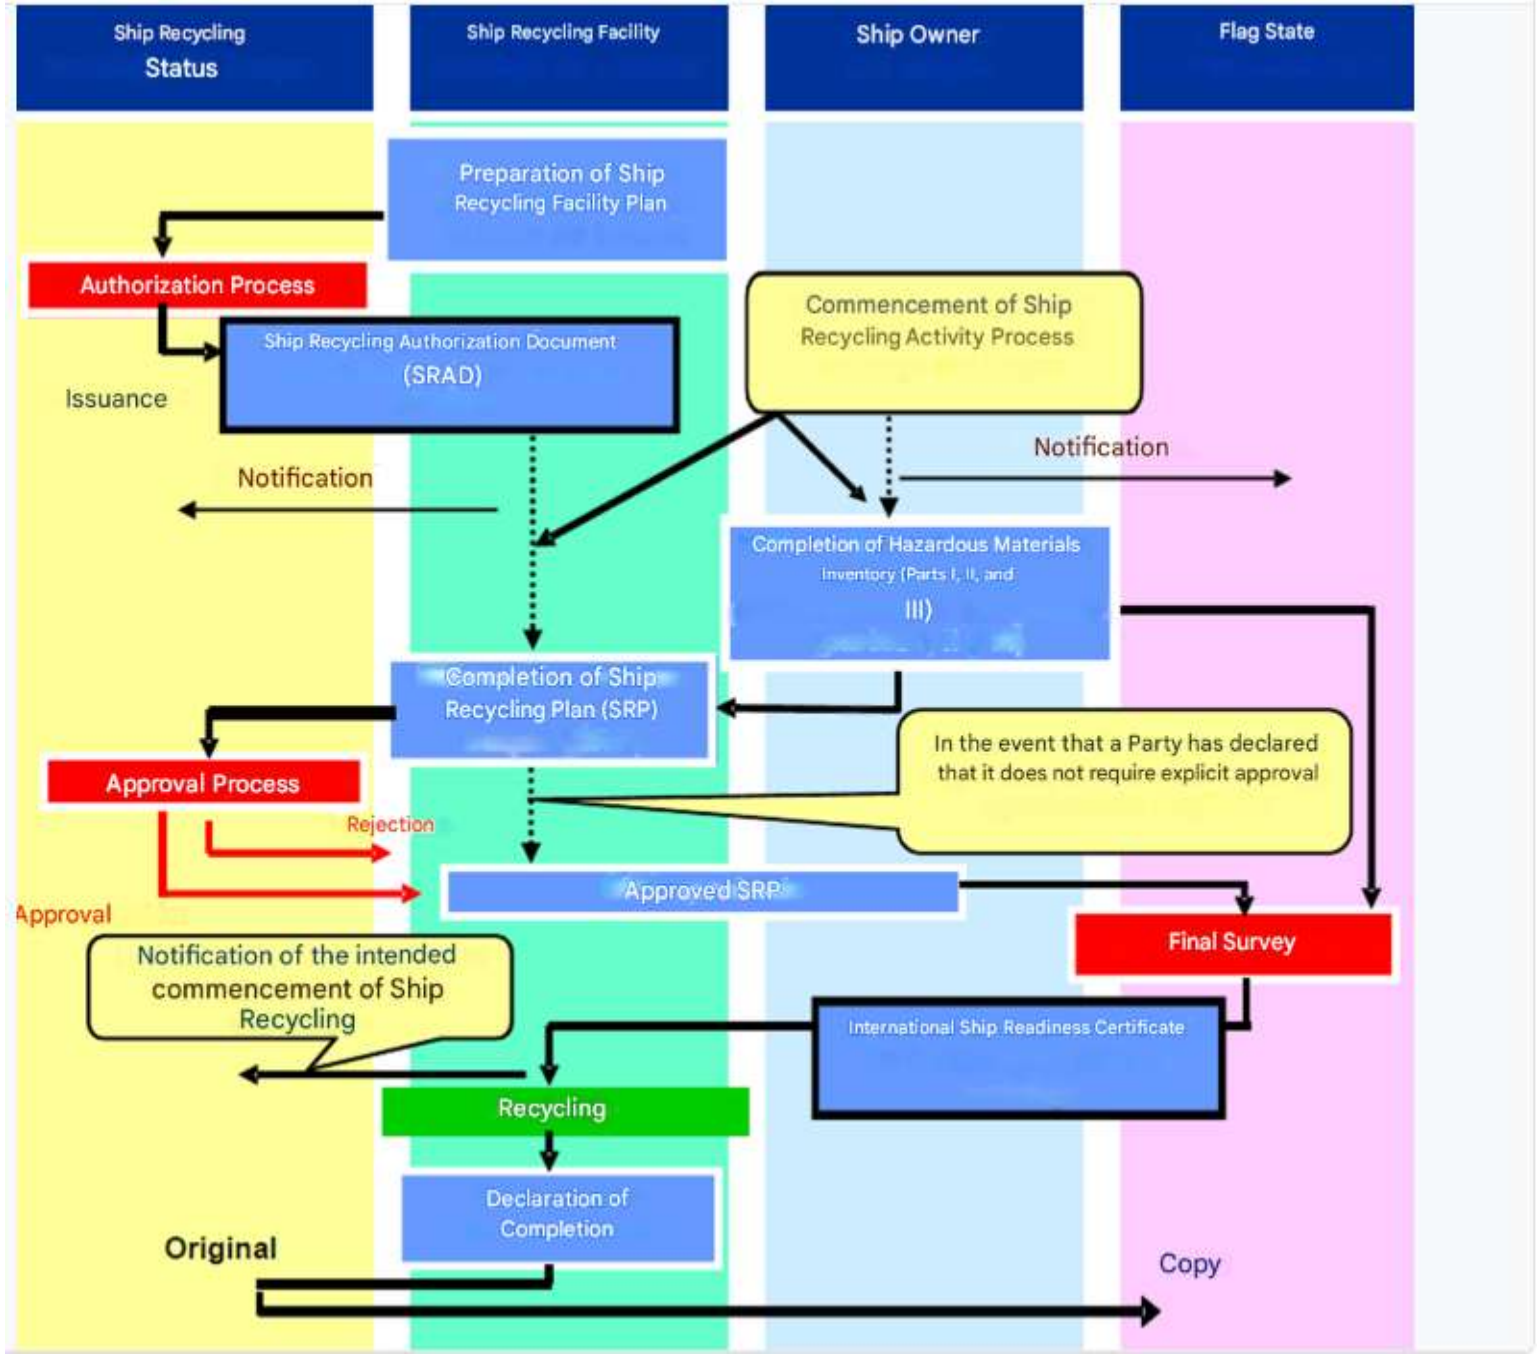

Dry Dock

Pier

All methods are acceptable for compliance with the HKC, provided that necessary measures are taken to protect human health and the environment.

Hong Kong Convention: Ship recycling process from preparation to completion

BASEL | ROTTERDAM | STOCKHOLM CONVENTIONS

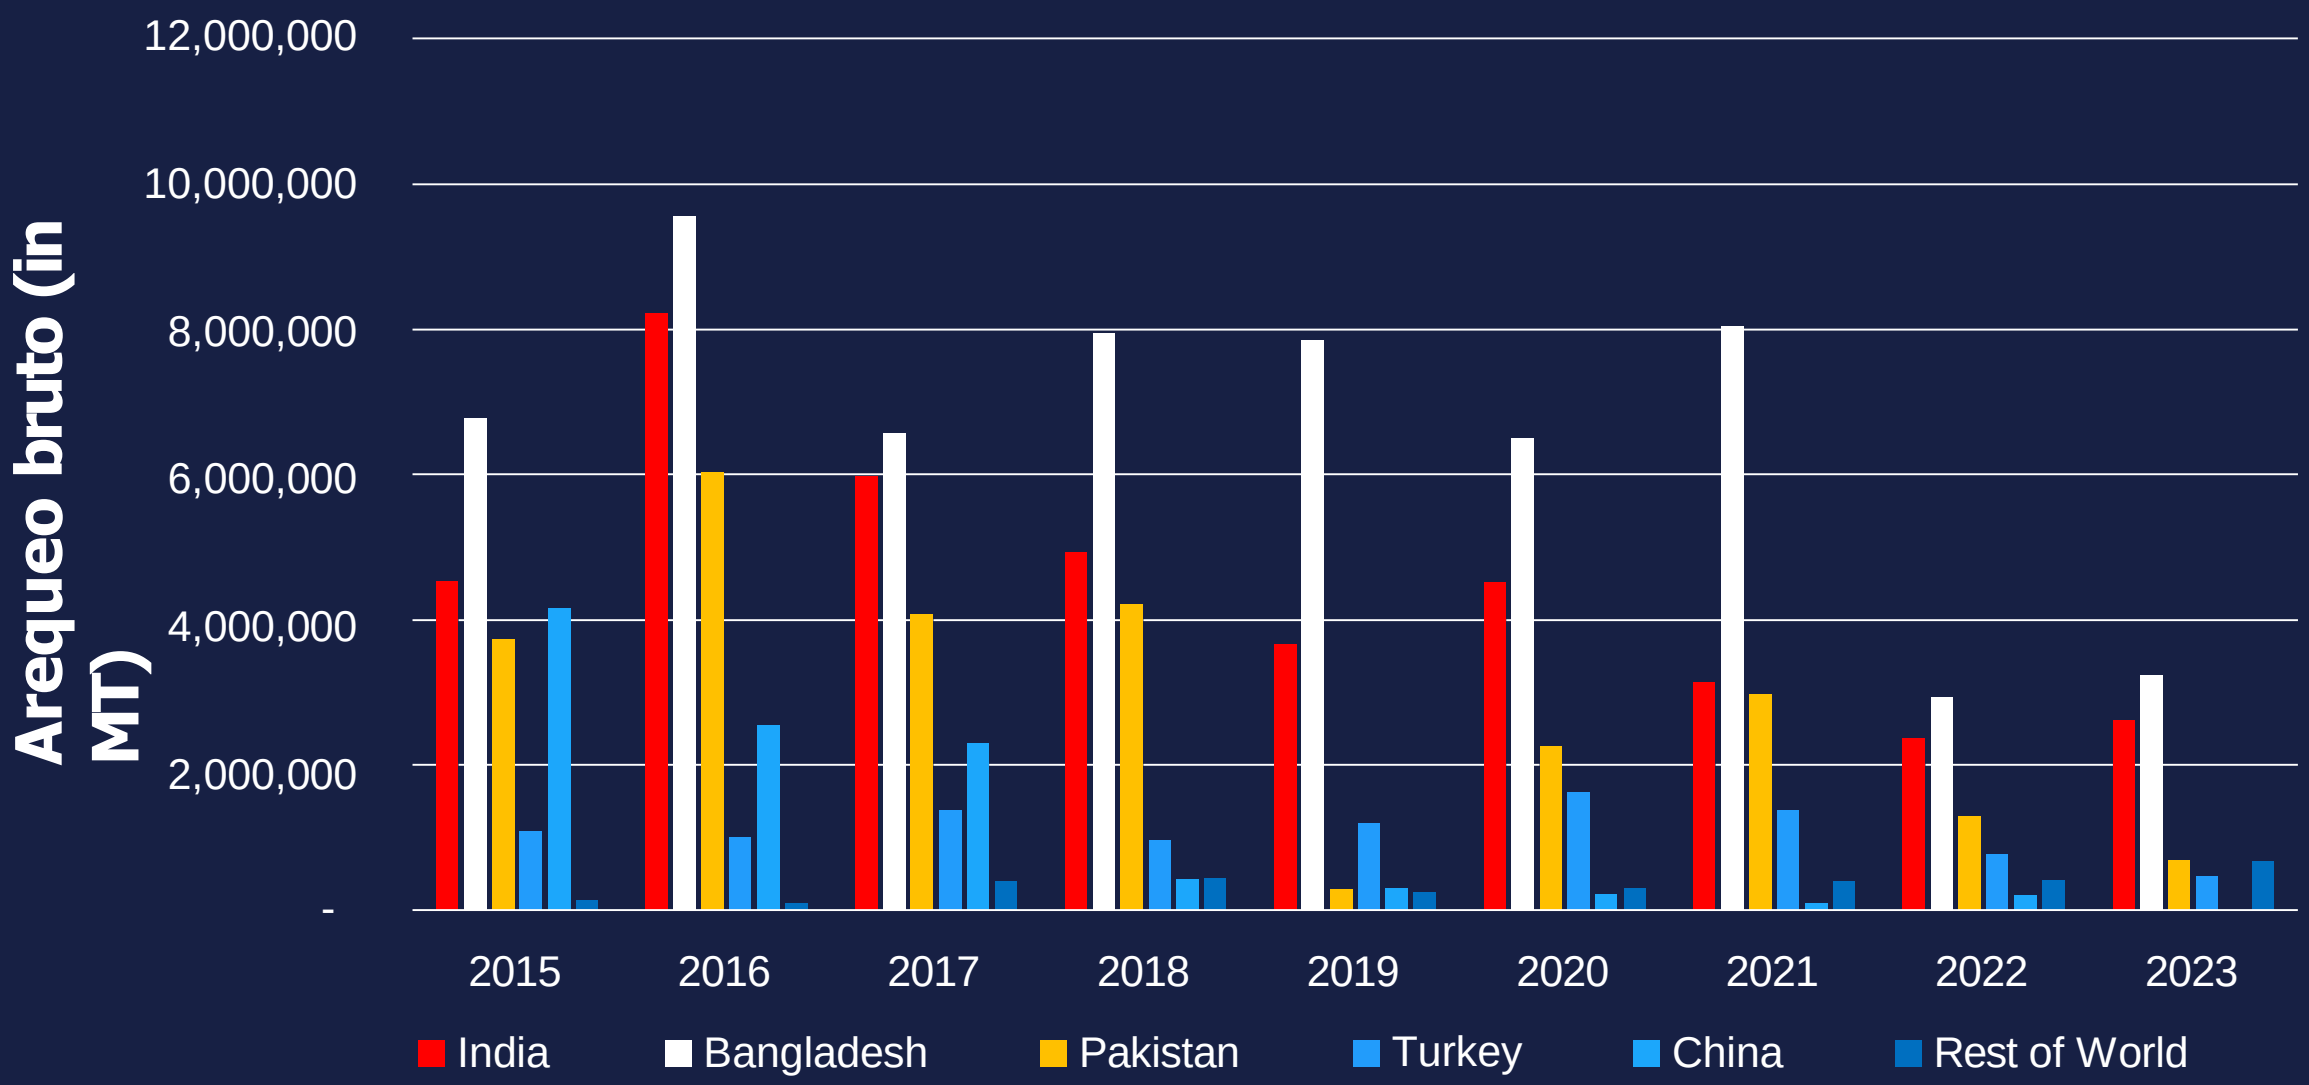

International coordination and cooperation are essential.

IMO Strategy to Reduce Greenhouse Gas Emissions from International Shipping

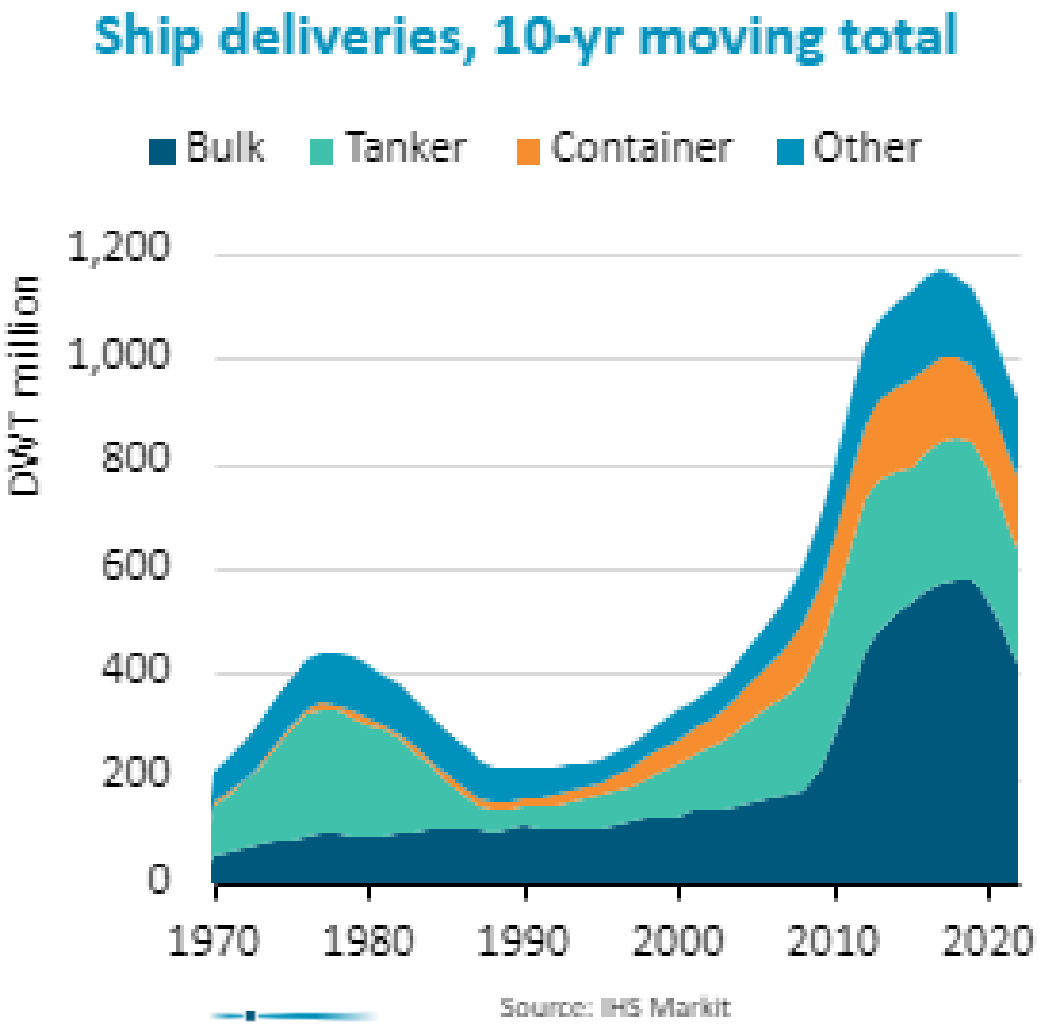

- ***By 2030, at least 20%, with a target of 30%.***
- ***By 2040, at least 70%, with a target of 80%.***

Total tonnage recycled since 2015

El mercado mundial del reciclaje de buques

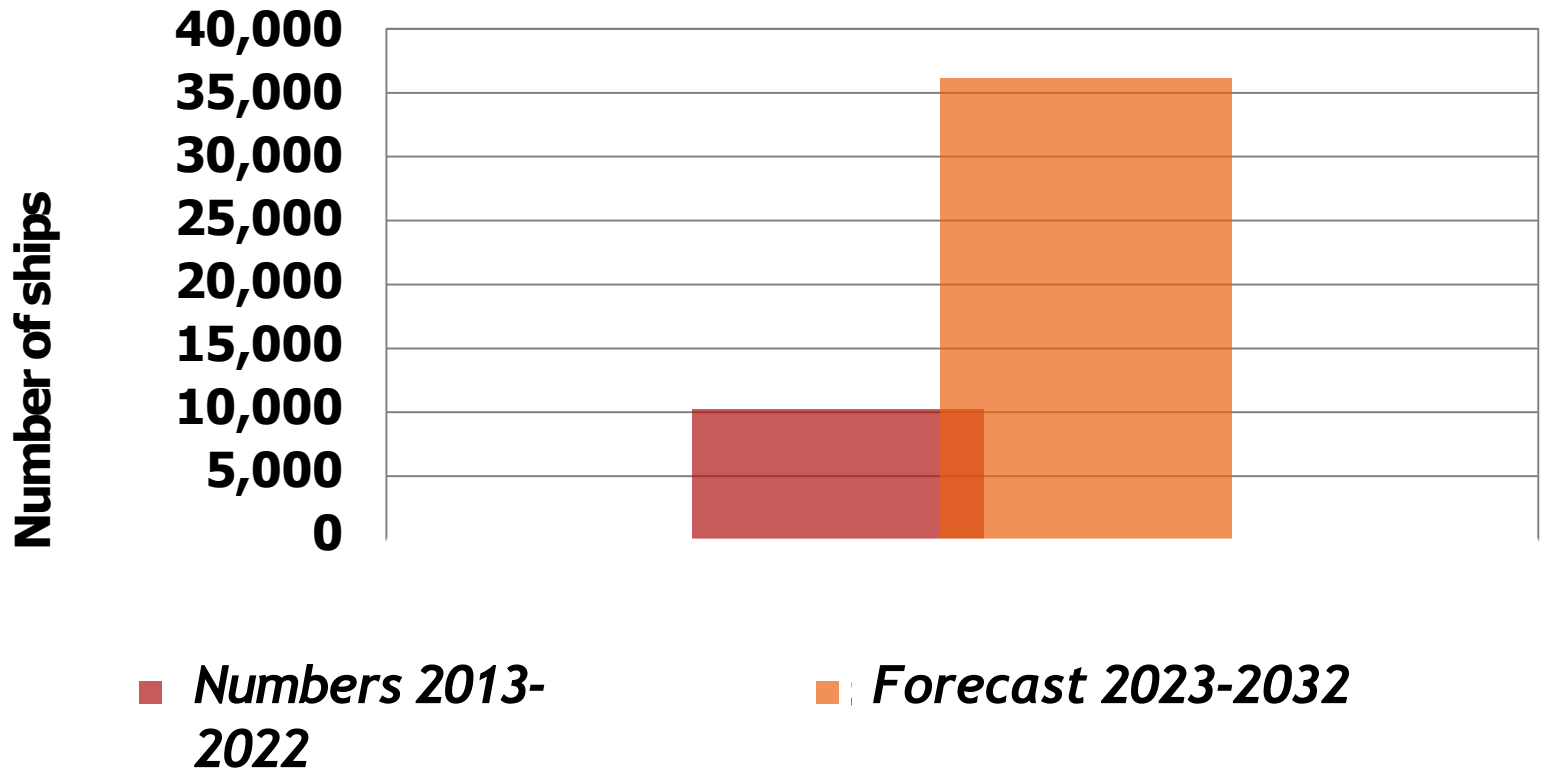

Fuente: BIMCO

- Today's ships have an average age of 27.8 years when they are sent for recycling.
- Ships built in the 2000s will be the main source of recycling in 2030.
- Compared to 1990, more than double the cargo capacity (ship size) was built in the 2000s. This will drive the projected increase in recycling.
- In 10 to 20 years: The size of ships built during the 2010s will increase by another 65%, potentially leading to even higher recycling levels.

The Global Ship Recycling Market

Forecast of demand for ship recycling services.

Source: BIMCO

Who or which country is responsible for the ship?

Change is possible: Indian Subcontinent, 2000-2015

Change is possible: Indian Subcontinent, 2000-2015

To modernize the industry, investment in infrastructure and new technologies is necessary.

Training can increase the operational health and safety of workers.

PUNTOS A RECORDAR

The Hong Kong Convention will enter into force in June 2025.

The Hong Kong Convention is complemented by the BRS Conventions and technical guidelines from UNEP and the ILO.

The demand for recycling services will significantly increase in the coming years.

Regardless of the country where the ship is recycled, it must be done following best practices and international recommendations.
