2025 ACTION PLAN TO ADDRESS MARINE PLASTIC LITTER FROM SHIPS

1 Background

1.1 Marine plastic litter enters the marine environment as a result of a wide range of land- and sea-based activities. Both macroplastics (e.g. large plastic items such as

plastic

bags, water bottles and fishing gear) and microplastics (small plastic particle s generally five

millimetres or less in size) persist in the marine environment and result in harmful effects on

marine life and biodiversity, as well as negative impacts on human health. In addition, marine

plastic litter negatively impacts activities such as tourism, fisheries and shipping. This plastic

marine life and biodiversity, as well as negative impacts on human health. In addition, marine

plastic litter negatively impacts activities such as tourism, fisheries and shipping. This plastic

material has the potential to be brought back into the economy by means of reuse or recycling.

Studies demonstrate that despite the existing regulatory framework to prevent marine plastic

litter from ships, discharges into the sea continue to occur.

1.2 IMO has recognized the importance of preventing pollution by garbage, including

plastics, from ships since the adoption of MARPOL Annex V, as well as the dumping of various

types of waste, including plastics, into the sea through the Convention on the Pre vention of

Marine Pollution by Dumping of Wastes and Other Matter 1972 (London Convention or LC)

and its 1996 Protocol (London Protocol or LP). This commitment was reinforced by the IMO

Assembly, at its thirtieth session, in December 2017, recognizing t he ongoing problem of

marine plastic pollution, as addressed in MARPOL Annex V, which required further

consideration as part of a global solution within the framework of ocean governance, in

marine plastic pollution, as addressed in MARPOL Annex V, which required further

consideration as part of a global solution within the framework of ocean governance, in

pursuance of the target of Sustainable Development Goal 14 to pre vent and significantly

reduce marine pollution of all kinds by 2025.

1.3 IMO recognizes the importance of continued action to manage this global issue.
