el certification scheme (SFCS) is a scheme, administered by

a legal entity, which certifies that a fuel is compliant with the requirements

set out in chapter 5 of this Annex and its associated guidelines.

5 Refer to the 2024 Guidelines on life cycle GHG intensity of marine fuels (resolution MEPC.391(81)), as may

be amended.

RESOLUTION MEPC.403(83) (adopted on 11 April 2025)

OF THE ENERGY EFFICIENCY DESIGN INDEX (EEDI)MEPC 83/17/Add.1

Annex 11, page 9

I:\MEPC\MEPC 83-17-Add.1.docx

.18 Target annual GHG fuel intensity (target annual GFI), expressed in grams of

CO2eq per unit of energy (gCO 2eq/MJ), is the value of the two tiers target

annual GFI (base target and direct compliance target) in accordance with

regulation 35 of this Annex.

.19 Zero or near-zero GHG emission technologies, fuels and/or energy sources

(ZNZs) means the type of ZNZs that qualifies for the annual fuel reward in

accordance with regulation 39.

Regulation 3

Exceptions and exemptions

General

1 Regulations of this Annex shall not apply to:

-

(ZNZs) means the type of ZNZs that qualifies for the annual fuel reward in

accordance with regulation 39.

Regulation 3

Exceptions and exemptions

General

1 Regulations of this Annex shall not apply to:

.1 any emission necessary for the purpose of securing the safety of a ship or

saving life at sea; or

.2 any emission resulting from damage to a ship or its equipment:

.1 provided that all reasonable precautions have been taken after the

occurrence of the damage or discovery of the emission for the

purpose of preventing or minimizing the emission; and

.2 except if the owner or the master acted either with intent to cause

damage, or recklessly and with knowledge that damage would

probably result.

Trials for ship emission reduction and control technology research

2 The Administration of a Party may, in cooperation with other Administrations as

appropriate, issue an exemption from specific provisions of this Annex for a ship to conduct trials

for the development of ship emission reduction and control technologies and engine design

programmes. Such an exemption shall only be provided if the applications of specific provisions

-

for the development of ship emission reduction and control technologies and engine design programmes. Such an exemption shall only be provided if the applications of specific provisions of the Annex or the revised NO x Technical Code 2008 could impede research into the development of such technologies or programmes. A permit issued under this regulation shall not exempt a ship from the reporting requirement under regulation 27 and regulation 37 shall not alter the type and scope of data required to be reported under regulation 27 and regulation 37.

A permit for such an exemption shall only be provided to the minimum number of ships necessary and be subject to the following provisions:

.1 for marine diesel engines with a per cylinder displacement up to 30 L, the duration of the sea trial shall not exceed 18 months. If additional time is required, a permitting Administration or Administrations may permit a renewal for one additional 18-month period; or

.2 for marine diesel engines with a per cylinder displacement at or above 30 L, the duration of the ship trial shall not exceed five years and shall require a

-

for one additional 18-month period; or

.2 for marine diesel engines with a per cylinder displacement at or above 30 L, the duration of the ship trial shall not exceed five years and shall require a progress review by the permitting Administration or Administrations at each intermediate survey. A permit may be withdrawn based on this review if the testing has not adhered to the conditions of the permit or if it is determined that the technology or programme is not likely to produce effective results in the reduction and control of ship emissions. If the reviewing Administration or

Administrations determine that additional time is required to conduct a test of a particular technology or programme, a permit may be renewed for an additional time period not to exceed five years.

Emissions from seabed mineral activities

3.1 Emissions directly arising from the exploration, exploitation and associated offshore

-

additional time period not to exceed five
