e alert management should have the capability to handle all other

alerts of navigational equipment comprised by the INS or connected to the INS in identical

manner and should incorporate all alerts that are critical to the safety of navigation.

3 MSC.128(75), MSC.191(79).

RESOLUTION MSC.252(83)

(adopted on 8 October 2007)

ADOPTION OF THE REVISED PERFORMANCE STANDARDS FOR

INTEGRATED NAVIGATION SYSTEMS (INS)MSC 83/28/Add.3

ANNEX 30

ADOPTION OF THE REVISED PERFORMANCE STANDARDS FOR

INTEGRATED NAVIGATION SYSTEMS (INS)MSC 83/28/Add.3

ANNEX 30

Page 24

I:\MSC\83\28-Add-3.doc

18.4 The logical architecture of the alert mana gement and the handling concept for alerts

should provide the capability to minimize the number of alerts especially those on a high priority

level (e.g. using system knowledge from redundancy concepts inside INS and evaluating inherent

necessities for alerts against navigational situat ions, operational modes or activated navigational

functions).

18.5 It should be possible to provide the centr al alert management HMI at least on the

navigating and manoeuvring workstation and allowing the handling by the bridge team.

18.6 The audible announcement of alerts should en hance the guidance of the bridge team to

the task stations or displays which are directly assigned to the function generating the alert and

presenting the cause of the announcement and related information for decision support, e.g.,

dangerous target alarms should appear and have to be acknowledged at the workstation where the

collision avoidance function is provided.

-

presenting the cause of the announcement and related information for decision support, e.g.,

dangerous target alarms should appear and have to be acknowledged at the workstation where the

collision avoidance function is provided.

18.7 As alerts can be displayed at several locations , the system should be consistent as far as

practicable with respect to how alerts are displayed, silen ced and acknowledged at any one task

station of the INS.

19 Priorities and categories

19.1 Priorities of alerts

19.1.1 The alert management should distinguis h between the three priorities listed:

• Alarms

• Warnings and

• Cautions

19.1.2 Alarms should indicate conditions requiri ng immediate attention and action by the bridge

team.

19.1.3 Warnings should indicate changed conditions and should be presented for precautionary

reasons which are not immediately hazardous but which may become so, if no action is taken.

19.1.4 Cautions should indicate a condition wh ich does not warrant an alarm or warning

condition, but still requires attentio n and out of the ordinary consid eration of the situation or of

given information.

-

19.1.4 Cautions should indicate a condition wh ich does not warrant an alarm or warning

condition, but still requires attentio n and out of the ordinary consid eration of the situation or of

given information.

19.1.5 Alerts additional to the alerts required by the organization shoul d be assigned to an

priority level using the criteria for classification.

19.2 Criteria for classification of alerts

19.2.1 Criteria for classi fication of alarms:

• conditions requiring immediate attention and action by the br idge team to avoid any

kind of hazardous situation and to maintain the safe navigation of the ship

• or escalation required as alarm from a not acknowledged warning.

19.2.2 Criteria for classification of warnings:

• Conditions or situations whic h require immediate attenti on for precautionary reasons,

to make the bridge team aware of conditi ons which are not immediately hazardous,

but may become so.

-

19.2.2 Criteria for classification of warnings:

• Conditions or situations whic h require immediate attenti on for precautionary reasons,

to make the bridge team aware of conditi ons which are not immediately hazardous,

but may become so.

19.2.3 Criteria for classification of cautions:

• awareness of a condition wh ich still requires atten tion out of the ordinary consideration of the situation or of given information.

19.3 Categories of alerts

19.3.1 Alerts should be separated for the alert ha ndling in INS into two categories
