erbaric evacuation systems , noting that hyperbaric evacuation systems

were of value in certain circumstances for the rescue of divers involved in saturation diving

operations where support ships might have to be abandoned,

RECALLING that, at its seventy -ninth session, it adopted, by resolution MSC.185(79),

RECOGNIZING the need to ensure that provisions for diving and hyperbaric evacuation

operations are kept up to date,

RECOGNIZING ALSO the need to keep the 1995 Diving Code in effect after the adoption of

the International Code of Safety for Diving Operations, 2023 (2023 Diving Code), which will

apply to ships of not less than 500 gross tonnage that have a diving system installed on or

after 1 January 2024,

BEARING IN MIND that the Assembly, by resolution A.886(21), adopted the Procedure for the

adoption of, and

adoption of, and

resolving that the function of adopting maritime safety -related performance standards and

technical specifications, as well as amendments thereto, shall be performed by the Committee,

on behalf of the Organization,

HAVING CONSIDERED, at its 107th session, the recommendation made by the

Sub-Committee on Ship Systems and Equipment, at its ninth session,

1 ADOPTS the International Code of Safety for Diving Operations, 2023 (2023 Diving

Code), set out in the annex to the present resolution;

2 INVITES Member States concerned to:

.1 consider the provisions of the 2023 Diving Code as recognized international

provisions for the design, construction and survey of diving systems, diving

units and hyperbaric evacuation systems; and

.2 take appropriate action to give effect to the 2023 Diving Code.

RESOLUTION MSC.548(107) (adopted on 5 June 2023)

ANNEX

INTERNATIONAL CODE OF SAFETY FOR DIVING OPERATIONS, 2023

(2023 DIVING CODE)

PREAMBLE

1 The International Code of Safety for Diving Operations, 2023 (2023 Diving Code) has been developed to provide an international standard of safety for diving units, the application1 of which will result in a level of safety for a diving operation on a diving platform equivalent to that required by the International Convention for the Safety of Life at Sea, 1974 (SOLAS).

2 The intent of the 2023 Diving Code is to enhance the safety of divers and diving support personnel, facilitate the international movement and operation of diving units and

support personnel, facilitate the international movement and operation of diving units and

provide a minimum international standard for the design, construction and survey o f diving units to safely support diving operations.

3 The 2023 Diving Code has been developed for all diving operations from diving units and this includes circumstances where a diving system may be temporarily installed on a diving platform.

4 The 2023 Diving Code expands the scope of the 1995 Code of Safety for Diving Systems (resolution A.831(19), as amended) and the Guidelines and specifications for hyperbaric evacuation systems (resolution A.692(17)), as set out in paragraph 1.4 of appendix 3 to this Code.

5 All diving personnel should be considered as persons on board (POB) with regard to the diving platform 's normal life -saving appliances. However, divers under pressure and requiring lengthy decompression (such as those in saturation) cannot access the diving

requiring lengthy decompression (such as those in saturation) cannot access the diving

platform's normal life-saving appliances. They can only be evacuated in hyperbaric survival craft (HBSC). For the period that such divers are under pressure they do not need to be included in the number of personnel who are allocated to the diving platform's normal life-saving appliances.

6 While the 2023 Diving Code has been developed for new diving units wh
